Warrant appointing the Commission	v	WHITE-PINE TIMBER—	
Extension of Commission	vi	Yield from white-pine forests	xxiii
		White-pine occupies the best lands	xxiii
		It is more profitable to farm such lands	xxiv
REPORT.		White-pine for butter-boxes	xxiv
Account of journeys of Commission	viii	Substitutes for white-pine for butter-boxes	xxiv
General consideration of investigations	xii	Requisites of the substitutes	xxiv
		Poplar as a substitute	xxiv
INDIGENOUS FORESTS—		<i>Pinus radiata</i> as a substitute	xxiv
Climatic Reserves—		Tawa as a substitute	xxv
Erosion, denudation, floods, &c.	xiv	Its present inferiority to white-pine	xxv
Original dense forest covering	xv	Foreign supplies soon necessary	xxv
Forest reserves at sources of streams	xv	Our own plantations will eventually supply the demand	xxv
Forest reserves on mountain dividing-ranges of the North Island	xv	Consumption of white-pine in Australia	xxv
Forest reserves on all high mountains and on banks of streams	xv	Dangers of legislation restricting output	xxv
Damage to forests by deer	xv	Recommendation that no restriction be imposed	xxv
Forest undergrowth; its functions	xvi	Recommendation that exhaustive tests of their suitability for butter-boxes be made of <i>Pinus radiata</i> , poplar, &c.	xxv
Scenic Reserves—		Precautions that must be observed in these experiments	xxvi
Reserves for preserving the distinctive scenery of New Zealand	xvi		
Reserves for protection of historic places	xvi	AFFORESTATION—	
Thermal-springs reserves	xvi	The Probable Future Demand for Timber for Commercial Purposes in New Zealand—	
Reserves for preserving examples of the flora and fauna of New Zealand as living museums	xvi	Questions required to be answered	xxvi
Reserves for pleasure resorts	xvii	What will be the future increase in population	xxvi
The development of scenery-preservation	xvii	To what extent will the use of timber increase	xxvi
Value of scenic reserves to the whole Dominion	xviii	Influence of substitutes on future demand	xxvi
Scenery reserves under the Land Act	xviii	Inadequacy of published returns of output and imports	xxvi
Danger of scenic reserves from fire, grazing of stock, and weeds	xviii	Increased consumption of timber probable	xxvi
The uplifting of scenic reserves	xviii	Probable future consumption, amount of	xxvii
Factors for consideration	xviii	Recommendation for more exact statistics	xxvii
Number and kinds of scenic reserves	xviii		
National parks	xviii	Particulars as to the Nature and Kind of Timbers likely to be required—	
Bird sanctuaries	xviii	Inadequacy of published data	xxvii
Proposed new scenic reserves	xix	Kinds of timbers likely to be most required	xxvii
Lake Waikaremoana	xix	Whether the present State plantations are adequate for the future supply of timber	xxvii
Lakes in Rotorua thermal district	xix	Yields per acre of European trees	xxvii
Wanganui River	xix	Probable yield in New Zealand	xxvii
Mokau River	xix		
The Waipoua Kauri Forest	xix	As to what Extent and in what Localities the Present State Plantations should be extended—	
Recommendations regarding same	xix	The crucial question in afforestation is cost	xxviii
Reasons for such	xix	The cost of borrowing by the State	xxviii
Warawara Kauri Forest	xx	Compound interest on cost of establishment	xxviii
Preservation of Scenic Reserves—		Cost of, and interest on, upkeep of plantations	xxviii
Recommendations for preservation	xx	Cost to date of State plantations	xxviii
		Cost per acre of State plantations	xxix
AREAS NOT REQUIRED AS SCENIC AND CLIMATIC RESERVES—		Yield from <i>Pinus radiata</i>	xxix
Removal of Reservations—		Profits from crops of <i>Pinus radiata</i>	xxix
Where removal of reservation advisable	xx	Returns from a long-rotation crop	xxix
Milling previous to settlement	xx	Uselessness of planting native timber-trees	xxx
Present or future utilization of forest areas	xx	With cheap land and good management State afforestation will pay	xxx
		Business considerations to be observed	xxx
BEST METHODS OF DEALING WITH INDIGENOUS FORESTS—		Plantation on an extended scale necessary to avoid future shortage of timber	xxx
Classification of Forests—		The percentage of forest area in European States	xxx
Administration of the milling-forests	xxi	Steady rise of 20 per cent. in consumption of timber	xxx
One system of measuring timber-trees advisable	xxi	Danger of reliance on foreign supplies	xxx
Dual control by Warden and Commissioner	xxi	Advantage to State of afforesting treeless regions	xxx
Reasons for terminating it	xxi		
Reasons why Commissioner should have sole control	xxi	Nurseries—	
Timber royalties for future planting purposes	xxii	Whakarewarewa Nursery	xxx
The Beech Forests—		Good soil necessary for nursery	xxx
Their increasing value as other timbers become scarcer	xxii	Extension of nurseries in North Island	xxx
Value of the beech timbers	xxii	Tapanui, Hanmer, and Ranfurly Nurseries	xxx
Confusion and danger from the loose naming of the beeches	xxiii	One central nursery advisable	xxx
Different trees called birches	xxiii	Studholme Junction is most suitable	xxx
Proposed illustrated pamphlet on the beeches	xxiii		
Proposed definite names for beeches	xxiii	Plantations—	
		Areas suitable for future plantations	xxxii
		Central Otago suitable for afforestation	xxxii
		Mackenzie Plains suitable for afforestation	xxxii
