Session II.

1918.

NEW ZEALAND.

PATENTS, DESIGNS, AND TRADE-MARKS.

TWENTY-NINTH ANNUAL REPORT OF THE REGISTRAR.

Presented to both Houses of the General Assembly pursuant to Section 113 of the Patents, Designs, and Trade-marks Act, 1911.

I have the honour to submit my report of proceedings under the Patents, Designs, and Trademarks Act, 1911, during the past year.

The total number of applications in respect of patents, designs, and trade-marks for the year has only slightly increased from the number in 1915, which was the lowest received as a result of the war—

1913.	1914.	1915.	1916.	1917.
2.627	2.316	1.953	2.040	2.038

but the number of specifications received in the year (which affords perhaps a better indication of the work of the Office) shows a marked increase over the total for each of the two previous years, although, of course, it is considerably behind the number received yearly prior to the war:—

1913.	1914.	1915.	1916.	1917.
2,051	1,860	1,553	1,483	1,682

The conditions arising from the war no doubt result in even fewer inventions than formerly being perfected and brought into use, and it is hoped that an opportunity will be afforded inventors of securing an adequate return from such of those that may prove of benefit to the public.

Following the Imperial Act, the New Zealand statute requires that the Office shall examine all specifications to see that the inventions have been properly described, and also authorizes it to search and require amendment of or refuse cases where an invention is partly or wholly anticipated. This is no doubt an important part of the duties of a Patent Office; but while in Great Britain and Australia special staffs of examiners are appointed for the purpose, practically no provision has yet been made here for doing the work in a thoroughly satisfactory manner. At a time like the present no extension of the existing facilities can probably be effected, but as amendments of the law are under consideration in Great Britain, and may be so here, it is perhaps not out of place to lay stress on the necessity for the provision of an adequate staff to render legislation in those respects fully effective.

The total revenue of the Office was £6,954–19s. 3d., as compared with £7,107–11s. 3d. for the previous year, a decrease of £152–12s. The expenditure amounted to £3,258–4s. 11d., an increase of £422–19s. 10d. on that of the former year, in which it was £2,835–5s. 1d.

Receipts other than those of the ordinary nature included fees for the renewal of marks registered prior to 1890, and due before the expiry of every fourteen years from that date.

1-H. 10.

Expenditure of an exceptional and non-recurring character accounted for £287 11s. 6d. Owing to unavoidable delay in compiling and printing the index for 1915, its cost is included in the expenditure for last year instead of the previous year.

The cessation of the payment of the renewal fees under the previous Act (the last of which are now being received), while the reduced renewal fees under the present Act are also being paid,

will tend to somewhat reduce the revenue, unless maintained from other sources.

The production of revenue beyond the amount required to defray its own expenses strictly forms no function of a Patent Office, and while further reduction of the fees (which are now the lowest in the world with the exception of those in the United States of America) does not at present seem advisable, there are many directions in which improvement may be effected before that state is reached when the needs of the public, of inventors, and the Office can be regarded as having been adequately met and any surplus be absorbed into the general revenue without detriment to the progress of invention and industry.

The present premises being required for other purposes, the Office is being shifted into the adjoining building. Though the accommodation there affords little if any more office-space than at present occupied, and is divided into a number of small rooms, it has the advantage of enabling the staff to be together in one building instead of in separate premises; of providing rather better facilities for those doing business with the Office; and, what is important, separate space for the library, where it can be more conveniently referred to during the day, and, it is hoped, be open to some extent at night also-the only time when the public for the most part are free to

refer to it.

Grave risk, however, is incurred of the loss or destruction of important titles and records, owing to there being no safe-accommodation for them, and it is important that this be provided as soon as possible.

Besides the questions already referred to, the printing of specifications and abridgments are amongst other matters of importance which require attention before the full benefit of our patent

laws can be reaped.

WAR PROVISIONS.

The only application for avoidance or suspension of enemy registration during the past year was in the case of one trade-mark, but it was not considered to be in the interests of the public that it should be avoided, and the application was accordingly refused.

Action still continues to be freely taken under the provision enabling further time to be granted where, owing to the war, the requisite steps cannot be taken or fee paid by the due date.

Where on account of the war it is considered inadvisable that inventions should become known to the enemy the publication of specifications is withheld, and for the same reason permission is required to be obtained before applications for patents are made abroad.

PATENTS.

The number of applications received during 1917 was 1,329, being 68 more than in 1916. Provisional specifications were left with 789 (784) applications, and complete specifications with 540 (479), while 355 (220) complete specifications were lodged in respect of applications with provisional specifications which had been previously filed, making a total of 1,684 specifications for the year, or 200 more than in the previous year. [Note.—A mistake occurs in this part of the report for last year. In place of the last two lines of the paragraph headed "Patents," commencing "of 1,483 applications," there should have been inserted "of 1,483 specifications, as compared with 1,553 in 1915, and 2,051—the greatest number received in any one year—in 1913.''

The total number of applications received to the 31st December, 1917, is 39,648, and the

number of patents then in force 4,258.

The amount received in patent fees was £5,060 11s. 3d., £781 6s. 9d. less than in the previous year. The decrease is chiefly in respect of renewal fees, £2,469 being received in that respect in 1917, as compared with £3,138 in the preceding year.

Applications were made for the restoration of 3 lapsed patents, and were all granted, the fees therefrom realizing £44. In 1916, 7 patents were restored, the fees amounting to £171. From women inventors 26 applications were received, as compared with 44 in 1916. patents of addition were sealed during the year. The provision enabling the subject-matter of two or more provisional specifications to be included in the one complete specification was availed of in only one case in 1917.

Value of Patents as shown by Extent to which they are maintained.

The extent to which the industries of the country are affected by its patent laws is a matter which probably only those connected with manufacture are in a position to ascertain, and the number of applications for patents, &c., affords little guide in the matter. The patents maintained over a term of years, &c., in proportion to those granted convey perhaps a slight indication of the number of inventions that are successful as compared with the number patented; and the following comparison is made for what it is worth, between the patents applied for by residents of New Zealand and granted and kept in force by the payment of the fees required after the fourth and seventh years under the Act of 1908, and after the third year under the Act of 1911. Similar figures with regard to patents applied for in the United Kingdom granted and maintained by the payment of fees for the fourth and seventh years are added,

Patent's sealed in the Years 1908, 1909, 1910, 1913, and 1914, and kept in Force by Payment of Renewal Fees.

New Zealand--Act of 1908.

It will be seen that in New Zealand for the period referred to 34.2 per cent. of the patents sealed were maintained by the payment of the fee due by the fifth year, and 15.1 per cent. by the payment of the fee due by the eighth year, the percentage of the patents granted to residents of this country maintained at the times mentioned being 31.5 and 10.8 respectively; and that 42.1 per cent. of the patents sealed under the Act of 1911 in 1913–14 were kept in force by the payment of the fee due by the fourth year, the proportion of such patents maintained to those granted to residents of New Zealand being 44 per cent.

The proportion per cent, of the patents maintained in Great Britain by the payment of the

fees due by the fifth and eighth years was 34.3 and 16.0 for the years mentioned.

1907

16,180

Examination of Specifications.

The result of the limited examination of specifications, &c., investigation of the novelty of inventions in respect of which, as has already been pointed out, no special provision has yet been made, was as follows:—

Number of applications received from 1st June, 1916, to 31st May, 1917	,
	1,367
Applications in respect of which amendment under section 5, or com-	
pliance with other formalities, required before acceptance	. 341
Applications in respect of which amendment on account of want of	
novelty required before acceptance	40
Not accepted	. 24

Classification.

The cheeking and revision of the classification, to the necessity of which I have referred in previous reports, is a work which should be undertaken as soon as an opportunity is afforded of putting it in hand.

Countries from which Applications received.

Last year 884 applications were received from residents in New Zealand, 2 more than in the previous year; and 447 from applicants outside New Zealand, 29 more than in 1916, of which number 215 were from the Commonwealth, 117 from Great Britain, and 82 from the United States of America.

Trend or Subject-matter of Inventions.

A considerably larger number of applications than usual were received on the subject of internal-combustion engines, 52 (22), and inventions in respect of cultivating appliances, 49 (32).

Furnaces, 23 (5), were somewhat more numerous than usual, but there is no noticeable increase in any other classes of inventions. Fewer applications were made for arms and munitions, 25 (35); fencing, 13 (21); milking-machines, 37 (51); and for certain other subjects.

DESIGNS.

Registration of Designs.

There were 83 applications received, and registration was effected in 80 cases, as compared with 113 applications and 108 registrations in the previous year.

The fees amounted to £25, being £2 less than in 1916.

TRADE-MARKS.

Last year 619 applications for registration of trade-marks were received, 47 short of the number in the previous year.

The amount received in fees in respect of trade-marks was £1,825 16s., as against £1,191 4s. for 1916, an increase of £634 12s. The revenue would have shown a falling-off, as the general business under this head was less than in the previous year, had it not been for the renewal fees in respect of marks registered before the year 1890, which, as has already been pointed out, fall due simultaneously at the expiry of every fourteen years from that date. Owing to delay in the mails and other causes due to the war, fees in many of those cases did not come to hand until the present year.

The number of trade-marks on the Register at the end of the year was 10,276.

Countries from which Applications received.

Residents of New Zealand lodged 250 applications, 30 more than in 1916, and persons in other countries 374, 77 less than the number for 1916.

Goods for which Trade-marks registered.

The largest number of applications received in any one class is 103 (in Class 42, substances used as food or as ingredients in food), as compared with 132 in 1916; and an increase occurs in 18 classes, while a decrease is shown in 24 classes.

GENERAL.

Notices of opposition were lodged in only 9 cases during the year. One appeal was heard and upheld.

PATENT AGENTS.

The number of Patent Agents on the Register is 23.

CONCLUSION.
