1920.

NEW ZEALAND.

PATENTS, DESIGNS, AND TRADE-MARKS.

THIRTY-FIRST ANNUAL REPORT OF THE REGISTRAR.

Presented to both Houses of the General Assembly pursuant to Section 113 of the Patents, Designs, and Trade-marks Act, 1911.

I have the honour, in pursuance of section 120 of the Act, to submit my report on the operations thereunder during the past year.

The total number of applications was 3,226, as compared with 2,134 in 1918, an increase of 1,092, or 66 per cent. The highest number in any previous year was 2,695, in 1910.

The amount received in fees was £9,345 1s. 2d., an increase of £1,216, or 15 per cent., over the revenue for the preceding and previous highest year. The sum expended was £3,373 6s. 9d. This was £541 17s. 8d. higher than in 1918 (chiefly owing to amount of printing done), but lower than in 1914, and only slightly in excess of the expenditure for the intervening years. The balance was £5,971 14s. 5d., and this added to the total of receipts over expenditure since the 1st January, 1890, brings the amount to £85,428.

With the lowest scale in the world except the United States the amount received in fees ecompares favourably with that of other places. In Australia, where the fees are about the same, the amount received was £14,946 in 1918, as compared with the revenue of this country of £9,345 for last year. The policy adopted towards inventors by the Commonwealth, which does not look to them to contribute to the general revenue of the State, has no doubt not been without its effect in the marked development of the secondary industries of that country.

While, as required by the Act, prominence is given to an account of fees and expenses in this report, it should be borne in mind that the object of the patent law is the development of manufacture by the promotion of invention, and, as the consideration for the patent granting monopoly of the use of an invention for a certain time is the full disclosure of it to the public by means of the specification, the payment of fees beyond those required to meet expenses, although not uncommon in various countries, does not in principle seem to be sound.

As frequently pointed out, much might be done to foster and stimulate useful invention in this country by the adoption of the recommendations made from time to time in these reports, and it is hoped that more will be effected in this respect to develop and as far as possible direct into more profitable lines the inventive genius with which the people of this country appear to be so highly endowed.

The small proportion of inventions that prove remuncrative renders it very advisable for inventors to ascertain as far as possible not merely the novelty but the prospects of commercial success of their inventions before going to much expense in patenting and exploiting them here, and more especially abroad.

The increase in the work of the Office without additional staff has led to delays and a large number of cases are at present pending. The inconvenience thus caused has been borne without complaint by applicants and agents, but it is hoped that better facilities for coping with the work, more especially as regards examination and searching, will be afforded.

PEACE PROVISIONS.

Provision was made by the Treaty of Peace for extending the time for payment of fees and taking other action which should otherwise have been effected during the period of the war, and the New Zealand Treaty of Peace Order applies such provisions with slight variations to this country. In a number of cases the extensions (for which no fees are required) have been granted, and many others are at present pending for evidence of nationality, &c. While the time allowed for payment of fees, &c., is extended until the 10th January next, that for filing applications to secure the prior date under the Convention was only until the 10th July, and inventors thus unable to obtain in this country the date of their applications abroad appear to be placed in the serious position of being liable to lose their rights by the prior publication of their inventions here.

AMENDMENT OF LAW.

Following the amendment of the patent law of the United Kingdom, proposals are under consideration to consolidate the law, bring it up to date, and effect improvements in other respects.

PATENTS.

(The figures in parentheses are for the year 1918.)

The number of applications received during 1919 was 1,880 (1,389), of which 995 (792) were filed with provisional specifications and 885 (597) were complete. Two hundred and seventy-seven complete specifications were lodged during the year in respect of applications with which proivisonal specifications had been filed.

The total number of applications received to the 31st December, 1919, was 42,917, and the

number of patents in force as on that date was 4,623.

The amount received in patent fees during 1919 was £7,335, being an increase of £758

above the amount received from the same source during 1918.

During the past few years both the renewable fees under the Act of 1908 and those under the present Act have been payable. The cessation of the former during the year will probably be made up for by increase of latter fees. The renewal fees of £5 and £10 under the old Act before the end of the fourth and seventh years averaged for 1910 to 1913 £2,252 per year, while those under the present Act amounted to £2,763 for last year.

The number of entries made on the Register in reference to assignments, licenses, &c., of

patents was 71 (52).

The amount of fees received in respect of the restoration of lapsed patents was £53, as against £102 received in 1918.

Twenty-one women inventors lodged applications during the year under review.

Two patents of additions were sealed during the year.

Countries from which Applications received.

Of the 1,880 applications 1,104 were received from residents of New Zealand in 1919, while in the previous year out of 1,386 applications 885 were by persons residing in this country.

From Australia 243 (Victoria 106, New South Wales 91) came to hand, as compared with 223 (Victoria 126, New South Wales 65) for the preceding year. Of others applying for New Zealand letters patent, 276 (156) lived in Great Britain, 200 (94) in the United States, and 11 (9) Canada. the figures in brackets being for the year 1918.

Trend of Invention.

The cessation of hostilities appears to have influenced, to a certain extent, the direction of inventive activity. There has been a decline in inventions relating to explosives and firearms, medical and surgical appliances, and marine vessels, including submarines, torpedoes, &c. There has also been a slight fall in the number of inventions relating to kauri-gum—36 (40); metalworking-16 (19); and fibre-dressing-16 (19) Increases are shown, however, in most branches of constructive industry, in which connection the following may be noted: Milking and dairying machinery and appliances, 89 (which is an increase of 34.8 per cent. on the previous year); fencing, 25 (108.3 per cent. increase); and building construction and materials, 120 (71.4 per cent, increase). Inventions relating to vehicles and accessories, which were noted in my last report as showing a remarkable increase, are again more numerous (98 as compared with 91), though the proportional accretion is not as great as in the prior year.

DESIGNS.

Registration of Designs.

There were 73 applications received, and registration was effected in 64 cases, as compared with 53 applications and 50 registrations in the previous year.

The fees amounted to £32, being more than in 1918.

TRADE-MARKS.

Last year 1,272 applications for registration of trade-marks were received, 577 more than the number received the previous year.

The amount received in fees in respect of trade-marks was £1,925 17s., as against £1,533 15s. for 1918—an increase of £392 2s. This branch of the business of the Office has shown an increase in the amount received in fees as well as the increased number of applications recorded.

The number of trade-marks on the Register at the end of the year was 10,903.

Countries from which Applications received.

The resumption of trade and pushing out for fresh markets is reflected in the greatly increased number of applications for registration of trade-marks, particularly from Great Britain, during the year. From residents of New Zealand 286 applications were received, as compared with 222 for the previous year. The number from Great Britain was 445, as compared with 178 for 1918; United States of America, 344 (142); New South Wales, 73 (63); Victoria, 63 (46).

Goods for which Trade-marks registered.

As usual, more applications for registration of trade-marks were in the food class (42) than in the others (181). More applications were received in 40 classes, and fewer in 8 classes, than in the previous year.

PATENT AGENTS.

The number of Patent Agents on the Register was twenty-two. One, I regret to record, died during the year, and one was registered after examination.

I take the opportunity of recording my appreciation of the services of the staff during the year,

Conclusion.

'l	he App	pendix hereto contains the following tables and lists, viz.:-	Page.
