NEW ZEALAND.

FINANCIAL STATEMENT.

(In Committee of Supply, 23rd July, 1924.)

BY THE RIGHT HONOURABLE W. F. MASSEY, P.C., MINISTER OF FINANCE.

Mr. Young,—

I have again the pleasure to submit for the consideration of honourable members the annual statements of account, which furnish a record of progress and unmistakable evidence of a continued return to prosperity. The revenue has been equal to expectations, and the expenditure has been kept down wherever possible to do so without loss of efficiency, with the result that there is a substantial surplus of revenue over expenditure. The financial transactions of the year are set out in detail in the printed tables attached to, and accompanying, this Statement.

CONSOLIDATED FUND.

ORDINARY REVENUE ACCOUNT.

REVENUE, 1923-24.

I estimated to receive during the year a total ordinary revenue of £27,969,000: the actual amount received was £27,960,370, or £8,630 short of the estimate, but £380,927 in excess of the amount collected during the previous financial year.

The princip	al <i>increases</i> ove	r 1922–23	were,—			£
Custom	. ·					1,205,923
Railwa	ys	• •		• •		234,605
Marine	• •			• •		40,355
	ation and other	fees	• •	• •		36,288

Land-te	ıx	• •				115,040
Income	-tax		• •			50,400
Post an	d telegraph	• •	• •	• •		23,790

The decrease in interest on public moneys is owing to the fact that the yearly interest due to the Consolidated Fund on the amount advanced to the Discharged Soldiers Settlement Account is outstanding. It is expected, however, that the account will be able to meet its obligations for the current year. In view of the shortage of houses and the demand for homes by discharged soldiers, it was considered preferable to allow the account the temporary use of the interest, amounting to £540,000, for advances to soldiers, rather than to increase the public

debt by further borrowing. To have borrowed for the purpose of paying this interest would have merely inflated the surplus and increased the annual charges of the public debt. The amount actually advanced to discharged soldiers for housing

during 1923-24 was £571,000 for 714 homes.

The revenue derived from the national endowments is now transferred direct from the National Endowment Account, instead of being passed through the Ordinary Revenue Account, consequently a nominal decrease is shown in that respect. With the exception of the death duties, the other decreases are attributable to reduced taxation and charges.

Expenditure.

The amount appropriated to meet the expenditure of the year was £27,483,378, but the expenditure was £26,148,005, which, when compared with the expenditure of the previous year, shows a net decrease of £115,755. The permanent charges on account of interest and sinking-fund payments, which included the Imperial funded debt contribution, have slightly decreased. The expenditure under special Acts is less by £505,347, but in the previous year £250,000 was paid to the Electric Supply Account under special enactment.

In the departmental expenditure the principal increases over the expenditure

of the previous year were,—

					£
	• •			• •	 206,960
Public buildings	• •		• •		 14,782
Mines	• •		• •	• •	 10,838

Included in the investments are debentures issued for State Advances purposes amounting to £2,326,150.

iii

This satisfactory result justifies the opinion expressed in last year's Financial Statement that the Dominion had reached the end of the period of unrest and uncertainty, and that natural causes, if supported by economical and careful administration, would ensure a speedy recovery.

The trade returns disclose steady progress and prosperous conditions, and indicate that everything this country produces can be sold or exchanged.

For the financial year ended 31st March, 1924, the value of the exports exceeded the value of the imports by £7,250,000, there being an increase both in volume and value. After making due allowance for the interest payable in the United Kingdom on Government and local bodies' loans there remained a balance in favour of the Dominion. It will, of course, be understood that any debit balance must ultimately be transferred to the permanent or semi-permanent debt; therefore, having regard to borrowing in the United Kingdom by the Government and local bodies, it is incumbent on me to point out that a credit balance can only be sustained by increased production. Borrowing abroad must therefore be kept within relative limits, and care taken that imported capital is strictly applied to productive purposes.

			Cash balance, 31st March, 1924	1,880,377
		£26,799,257		£26,799,257

From the foregoing it will be seen that the accumulated revenue surpluses have been applied either to capital or to debt-reduction purposes. Education and soldier settlement have been provided for, whilst unemployment and the provision of homes for settlers and workers have received attention.

The amounts transferred to the various funds and accounts have relieved the permanent charges for interest and sinking fund to the extent of £442,000 per annum, while the annual revenue of the interest-bearing investments amounts to no less than £775,000, thus affording an annual relief to taxpayers of approximately £1.217,000.

To illustrate the advantage of a surplus of revenue from one year to finance the succeeding year, it may be pointed out that in April, 1923, £1,300,000 in cash was immediately required for advances to imprestees, and on the average this sum remained outstanding throughout the year. Indeed, the expenditure exceeded the revenue during the earlier part of the year. At the end of seven months, the disbursements from the Ordinary Revenue Account exceeded the receipts by over £2,500,000, consequently the surplus of £1,300,000 was not sufficient to meet requirements, and but for a previously accumulated surplus it would have been necessary to issue Treasury bills for ordinary revenue purposes, which would have meant increased interest charges. None were required, however, in New Zealand, although the State Advances and other accounts had to be financed. The country was fortunate in possessing a cash reserve that could be used for these purposes without borrowing—a course which, in the interest of sound finance, I was anxious to avoid.

ECONOMIES.

The expenditure of the Consolidated Fund for 1923-24 continues to reflect the policy of systematic economy inaugurated in 1921, the expenditure for the past three years being,—

			£
1921-22	• •	 	28,466,838
1922 – 23		 	26,263,760
1923-24		 	26,148,005

The reduction in expenditure in 1922–23 over that of the previous year totalled £2,203,078, and this contraction has not only been sustained but a still further reduction of £115,755 is recorded.

TREASURY BILLS.

It was not necessary to anticipate the receipt of revenue by the issue of Treasury bills in New Zealand, as the balance carried forward at the 1st April enabled requirements to be met during the difficult months of the year.

In order, however, to provide additional cash for the State Advances Office, instead of selling investments held by the Ordinary Revenue Account, advantage was taken of the Dominion's credit in London to issue Treasury bills amounting to £2,250,000, and also £500,000 in anticipation of the 1924 loan for public works.

The Treasury bills for the first-mentioned sum were redeemed before the 31st March, so that no bills against revenue were outstanding. The following liability of £2,100,000 existed in the shape of bills issued for loans-redemption purposes: £1,000,000 issued in 1922–23, £1,100,000 issued in 1923–24, and also the £500,000 bill against the new loan referred to above.

The provision of cash by means of bills for short terms at low interest rates has meant a considerable economy in the annual interest charge. The saving effected by the renewal of the redemption bills, instead of incorporating them in the 1923 and 1924 loans, is estimated to amount to £51,700.

BRITISH WAR-LOAN STOCK.

Temporary investments in British War-loan stock held by certain accounts were realized during 1923-24, totalling £945,000, of which £815,000 was purchased in 1917 at 95, and the remainder in 1922 at about 99. The profits on these transactions amounted to £46,424.

B.**—6.**

The British Government recently offered an inducement to holders to convert this 5-per-cent. stock into $4\frac{1}{2}$ -per-cent., maturing in 1943, but after considering the advantages of retaining the present holding, which earns about £5 5s. per cent. until maturity in 1929, it was decided not to apply for conversion.

NEW ZEALAND INSCRIBED STOCK IN LONDON AND LOAN CHARGES.

I referred last year to a reduction in the Bank of England charges for the management of New Zealand inscribed stock in London dating as from 1913, and that a refund of £30,676 would be made, but subject to Imperial taxation paid by the bank amounting to £14,383. Representations were made as to a remission of this taxation, and I have since been advised that altogether £23,293 has been refunded.

As regards loan expenses, further minor reductions in charges should result in a saving of £3,750 on the last loan.

PURCHASE OF NEW ZEALAND STOCK.

A purchase was recently effected, at a profitable discount, of our 4-per-cent. stock maturing in 1929. An amount of £250,000 was secured for cancellation in terms of section 24 of the Finance Act, 1921–22. The transaction will represent a saving over the period of five years of about £60,000 in premium and interest.

1924 LOAN.

Although I was able to finance the last year and provide additional large sums for the Advances Office without outside borrowing, I decided in May to place a loan of £5,000,000 in London, £3,000,000 of which was for public works, £1,000,000 for advances to settlers, and £1,000,000 for advances to workers. The issue was $4\frac{1}{2}$ per cent. at £95, and I am pleased to state that the loan was subscribed fourfold, and, moreover, immediately went to a small premium.

The interest-yield of the loan to investors is £4 14s. 9d. per cent. per annum. To assist in meeting the heavy demands that have been made, I have arranged to obtain some additional capital on the same terms for State-advances purposes.

The following table of comparison with recent issues of other Dominions indicates the high credit of New Zealand in London:—

Date.		Borrower.	Amount of Loan.	Rate per Cent.	Date Maturing.	Issued at	Interest Return per Cent.	
1924.			£	,			£ s. d.	
February 26		South Africa	4,000,000	5	1933-43	99	5 1 0

^{*} Approximate.

PUBLIC WORKS FUND.

The expenditure on public works was practically the same as that for the year 1922–23, and amounted to £3,749,160—the bulk being for railway-construction, additions to open lines, roads, &c., and telegraph-extension. My colleague the Honourable the Minister of Public Works will at a later date submit important proposals making for continued progress with developmental works, and you will be asked to provide by legislation for next year's expenditure.

I propose to meet the requirements of the current year with £3,000,000 of the

I propose to meet the requirements of the current year with £3,000,000 of the loan recently raised in London, and to supplement this amount by again transferring the sum of £1,000,000 from surplus revenue.

ELECTRIC SUPPLY ACCOUNT.

The expenditure under appropriation on development of hydro-electric schemes amounted to £812,975, as compared with the sum of £472,874 expended during the previous year, an increase of £340,101. Full details in connection with works in operation and under construction will be furnished later by my colleague the Honourable the Minister of Public Works.

The principal works undertaken were development works in connection with the Mangahao scheme for providing Wellington, Wanganui, and Hawke's Bay districts with hydro-electric power, and extensions at Horahora and Lake Coleridge, both of which schemes at present supply large areas with power. It is expected that current from Mangahao will be available during the present year.

MAIN HIGHWAYS.

Provision has been made for the finance of the Main Highways Board as constituted in terms of the Act of 1922.

The Consolidated Fund estimates provide for the payment of £35,000 to the Main Highways Revenue Account, which has also at credit £249,681, the proceeds of the duty on motor-vehicle tires. In addition, the Main Highways Construction Fund is to receive £200,000 from the Public Works Fund and £300,000 from loan-money.

Legislation empowering local bodies to borrow for main highways purposes is in course of preparation.

IMMIGRATION.

The immigration policy adopted by the Government has been the means of securing a steady flow of new arrivals into the Dominion during the past financial year. The conditions under which assisted passages may be secured are in every way favourable to the migrants, and, as the Imperial and New Zealand Governments are working together, the cost of each migrant to the Dominion is being kept well within bounds.

Immigration of a desirable type of settler or tradesman will assist in the expansion of trade in the primary and secondary products, tending to open up additional markets abroad.

vii B.—6.

The following extract from the remarks of the Right Hon. L. S. Amery, formerly Chairman of the Overseas Settlement Committee at the Imperial

Economic Conference of last year, is of special interest:—

"Migration by Families.—More particularly I should like to lay stress on what I referred to just now in connection with the ex-service free passages—the desirability of making it possible for the man who has a family to go across, because, from the point of view of future citizenship, that is the most valuable element we can send to you. It is true from the point of view of the individual employer a single man is preferred, but from the point of view of development the man who goes with a family of growing children—the citizens, the creators of the wealth of the future—is the most welcome settler. I should like to draw attention to this fact: that New Zealand, in this respect, has agreed with us on assisted-passage schemes very substantially ahead of any other Dominion in the very liberal assistance they give to the man with a family—that is to say, that children up to a certain age go entirely free and the older sons and daughters at a very reduced rate. I think to-day a man with quite a large family can get to New Zealand on practically no more than it takes a man and his wife alone to go to Australia. I should like to press very strongly the importance of that."

CUSTOMS AND EXCISE.

For the past financial year the Dominion's general prosperity consequent upon the buoyancy of our export trade was reflected in the Customs revenue. Including £123,568 tire-tax credited to the Main Highways Account, the Customs and excise duties totalled £7,361,783, or £361,783 over the estimate. The main items of Customs revenue were,—

10101110 11010,	1923–24. £	1922–2 3. £	$\begin{array}{c} \textbf{Increase.} \\ \textbf{£} \end{array}$
Spirits	1,079,784	796,577	283,207
Tobacco, cigars,			
cigarettes	1,271,135	1,239,212	31,923
Apparel and textiles	1,798,287	1,621,913	176,374

Primage	417,198	341,087	76,111
Totals	£7,277,435	6,070,856	1,206,579

The values of imports and exports for the past six financial years are as under:—

		Imports.	Exports.	Excess of Exports.
		£	£	£
1918 - 19	• •	 26,437,284	32,263,792	5,826,508
1919-20		 32,162,029	50,776,650	18,614,621
1920-21		 67,463,269	48,219,672	<i>19,243,59</i> 7*
1921-22	• •	 35,986,060	43,794,883	7,808,823
1922 – 23		 37,112,779	45,548,700	8,435,921
1923-24		 44,401,756	51,652,606	7,250,850
		₩ 1 77	,	

* Excess of imports.

One of the chief factors has been the firm position of the wool-market, for, while wool no longer holds first place in our exports, it nevertheless is of such importance that fluctuations in wool-values may make all the difference between a favourable or an adverse trade balance.

Customs and excise duties (other than beer duty) for the current financial

year are estimated to produce £7,350,000.

The Customs tariff of 1921, since modified to some extent, is, on the whole, working smoothly. On account, however, of the unstable conditions existing in various European countries, it is not possible to gauge definitely the effect of the increased preference granted by the 1921 tariff to goods of Empire origin. The operation of the preference provisions, moreover, does not work out as favourably to British manufacturers as was anticipated, owing to the fact that if only 25 per cent. of the factory or works cost of an article is due

to expenditure on British material and labour it qualifies for preference, even though 75 per cent. of the cost may be of foreign origin. A proposal to increase the preference from 25 to 50 per cent. is under consideration.

The following figures show the values of imports from Empire and foreign

sources respectively in 1914 and during the past four years:-

		1914.	1920.	1921.	1922.	19 2 3.
		£	£	£	£	£
United Kingdom Other British countries	• • •	11,257,720 5,059,776	28,554,587 15,311,372	20,832,520 10,317,074	18,296,173 7,709,179	22,532,205 9,334,796
Total British Empire Foreign countries	••	16,317,496 5,538,600	43,865,959 17,729,869	31,149,594 11,792,849	26,005,352 9,007,209	31,867,001 11,511,492
Total all countries		21,856,096	61,595,828	42,942,443	35,012,561	43,378,493

The embargo against the importation of goods from Germany has been removed. Owing to the dislocation of industrial conditions in that country, due to depreciated currency and other causes, and uncertainty as to what special duties might be imposed on German goods, the amount of such goods imported into the Dominion has not reached large figures. In the year 1923 such imports were valued at £68,915, being 0·16 per cent. of total imports. During the first three months of 1924 German goods imported were valued at £47,009, equal to 0·4 per cent. of total imports during that period.

The conditions governing imports from Germany have recently been modified,

but it is too early yet to judge what will be the effect of the alteration.

INLAND REVENUE DEPARTMENT.

LAND-TAX.

Compared with 1922-23 land-tax receipts decreased by £115,040, viz.:—

1922–23 1923–24	••	• •	1,541,502 1,426,462
-	Decrease	••	 £115,040

This decrease represents a portion of the anticipated reduction in revenue following the removal of the super-tax, the balance being compensated for by the increased value of land in some of the districts revised under the provisions of the Valuation of Land Act and the collection of a considerable amount of arrears of tax.

INCOME-TAX.

The income-tax receipts compared with the year 1922-23 show a decrease of £50,400, the figures for the respective years being,—

				£
1922-23	• •			3,831,932
1923-24	• •	• •		3,781,532
	Decrease		• •	£50,400

This decrease is due to the reduction of 20 per cent. made in the rates of tax. It was expected, however, that the decrease would have been much greater, but the augmented incomes of taxpayers generally, as a result of improved conditions, furnished a compensating factor.

During the recess a Commission was set up to investigate the system of land and income taxation in New Zealand in all its aspects. The Commission, which was composed of eminent business men who had made a special study of the whole question of taxation, furnished an able report, which has been presented to Parliament.

The recommendations of the Commission, and the evidence which was given, will be most useful when framing legislation which deals with taxation both during the present session and in future sessions of Parliament.

STAMP AND DEATH DUTIES.

The net revenue collected under the Stamp Duties, Death Duties, and Amusements-tax Acts was £3,343,781.

The following table shows the comparison with the previous year:—

COMPARATIVE STATEMENT OF STAMP AND DEATH DUTY REVENUE FOR 1922-23 AND 1923-24.

Item.	192 2–2 3.	1923-24.	Increase.	Decrease.
Adhesive stamps	£ 72,375 537,726 1,779,177 50,674 122,597 58,106 210,577 607,657 137,546 4,856	£ 80,488 615,659 1,455,655 61,660 135,474 58,862 197,792 618,425 115,039 4,727	\$,113 77,933 10,986 12,877 756 10,768	£ 323,522 12,785 22,507 129
			121,433	358,943 $121,433$
Totals	3,581,291	3,343,781	• •	237,510

The increase derived from duty on instruments indicates increased activity in buying and selling property.

The apparent decrease in the revenue from death duties is explained by the fact that in the previous year, owing to a change in the law making for earlier payment, more than a year's revenue was obtained from this source.

The decrease in amusements-tax is accounted for by the increase in the limit of exempted admissions from 9d. to 1s. This alteration of the law operated during the last seven months of the year.

The estimated receipts for the current year are £3,310,800.

RAILWAYS.

The gross receipts from the Working Railways amounted to £6,984,211, an increase of £256,409 on the previous year's figures. The working-expenses amounted to £5,403,766. The net revenue is therefore £1,580,445, which amount represents a return of £3 16s. 6d. per cent. on the capital cost.

Although there has been a fair increase in the revenue, the amount fell short of the estimate by £15,789, due principally to the miners' strike at Westport during the period September to January.

During the year the Department was confronted with considerable loss owing to heavy floods and slips which occurred in both the North and South Islands.

The improvement in the financial position is the outcome of the savings effected during the year, but the need for exercising rigid economy still remains.

It is still necessary to be conservative in the matter of estimating the revenue for the ensuing year, which I place at £7,100,000, and the expenditure at £6,050,000.

A Commission has been appointed to inquire into and report upon the organization and running of passenger and goods traffic, and matters relating to the mechanical section of the system, as well as to the construction, renewal, and maintenance of the permanent-way. The Government has secured the services of Sir Samuel Fay and Sir Vincent Raven, two British railway experts of high standing, who are at present engaged on an investigation of the railway system of New South Wales under a similar order of reference. It is expected that as a result of their visit to this Dominion these gentlemen will be able to make recommendations which will be of great value to the management of the New Zealand railways and to the public who own and use them.

POST AND TELEGRAPH DEPARTMENT.

The revenue of the Department during the year was £2,681,240. The principal items were—Postages, £1,032,347; telegrams, £700,329; and telephone-exchange receipts, £825,178. Excluding interest charges on capital, the expenditure totalled £2,117,952.

Deposits in the Post Office Savings-bank amounted to £29,598,372, and withdrawals to £29,510,321—an excess of deposits over withdrawals amounting to £88,051. The amount at the credit of 710,157 depositors at the 31st March, excluding interest for the year, was £44,448,444.

Money-orders and postal notes to the total value of £5,239,485 were issued, and the payments on the same account amounted to £4,853,224. War-loan certificates redeemed during the year amounted to £1,293,705, making total redemptions to date of £4,642,779.

Apart from the provision for statutory increases in salaries to lower-paid officers, the estimated expenditure for 1924-25 is practically the same as that voted last year.

The following table shows the staff employed at the end of the financial year as compared with that employed twelve months earlier:—

			31st March, 1923.	31st March, 1924.
Permanent staff	• •	• •	7,542	7 , 340
Temporary staff			395	417
Casual staff			637	1,246
Totals			8,574	9,003

The increased total is accounted for by the unusual development in telephone-line construction, which necessitated the engagement of over six hundred additional men during the year. If material is available it is likely that this casual staff will have to be further augmented to meet the many calls for additional telephonic communication.

PENNY POSTAGE.

On the 1st October, 1923, the penny postage was re-established within the Dominion, and to all parts of the British Empire, by the further decrease of one-halfpenny in the letter rates. Opportunity was taken at the same time to make appropriate reductions in rates of postage on other classes of mail-matter. When it is remembered that the cost of concessions in postage brought about by the reductions effected in February and October, 1923, was £600,000 per annum, there is cause for congratulation that revenue from postages last year was only £257,149 less than that derived from the same source in the previous year. With a continuance of prosperity this loss should shortly disappear.

TELEPHONE RATES.

An amended scale of charges was brought into operation on the 1st October last, and the former method of collecting six months' rental in advance was reverted to. This alteration in the method of collection had the effect of inflating the revenue for the financial year, a sum of £825,178 being received, as compared with £595,967 during the previous twelve months, but of this amount £149,000 has to be earned in the current year. Although the present charges are moderate, they are designed to earn interest on the capital outlay.

Abolition of War-tax on Cable Messages.

During the year it was decided to abolish, as from the 1st April, 1924, the tax of 2d. imposed since 1915 on all cable messages forwarded from New Zealand. The concession to the public in this instance amounts to approximately £2,200 per annum.

EDUCATION.

The expenditure from Government sources on education services during the past financial year was as follows:—

From Consolidated Fund—			£
Vote, Department of Education			2,604,508
Special Acts			96,506
Teachers' Superannuation Fund			68,000
Primary-education reserves revenue	• •		108,071
Secondary-education reserves revenue			8,287
Native-schools endowment revenue			450
National-endowment revenue			77,788
Education loans for buildings			295,681
Public Buildings Fire Insurance Fund	• •	• •	12,490

£3,271,781

В.—6.

If to this is added the amount derived by Secondary-school Boards and University College Councils from reserves vested in them—about £78,100—the total expenditure from public sources is approximately £3,349,900, as compared with £3,286,000 in 1922–23.

хi

The total expenditure has grown from £1,233,328 in 1911–12 to £3,271,781 in 1923–24, or an increase of 166 per cent., whilst the total cost of education for the current year is estimated at £3,351,000.

In 1911 the average salary for an adult primary-school teacher was only £160, but the salaries were increased by the 1914 Act, and were subsequently further increased until the average now is £268, or 67 per cent. higher.

In the secondary scale the average salary of principals in 1911 was £464, and that of assistants only £204. First by increasing the capitation grant, and afterwards by providing a Dominion scale of salaries, these averages were increased to £636 and £315, while similar provision has been made for improving the salaries of technical teachers.

The cost of education mounts up as the school population increases and extended use is made of the privileges of free secondary and higher education. While it is a matter for satisfaction that the number of children taking post-primary courses in our high schools is thus increasing, it is a question whether the present system does not tend rather to induce young people to follow a line of education and training that has a bias towards the professional and clerical, to the disadvantage of practical agricultural and industrial pursuits. The Department is giving its attention to this problem with the view of evolving a provision which should give a sound post-primary education to the pupils who do not go on to the University or the professions.

The large sum of £1,993,985 has been expended since 1918–19 in meeting the pressing demand for school buildings, and suitable provision is being made for continued progress in this important connection.

DEFENCE.

The expenditure out of the Consolidated Fund for defence, including ordnance services, aviation, and the maintenance and training of the Territorial Force, for the year ended 31st March, 1924, amounted to £348,632, or £27,722 less than the amount appropriated.

NAVAL DEFENCE.

The expenditure on naval defence for the financial year ended 31st March, 1924, amounted to £374,966, made up as follows:—

Permanent charges—					
Naval Defence Act, 1909—	-H.M.S. "	New Zeala	and ''—	£	£
Interest				£78,995	
Repayment of funded	debt	• •		10,248	
I V					89,243
Annual appropriation—				•	
Vote, Naval defence	• •	• •		• •	285,723
					£374,966

The estimates for the current year have been framed with a view to continuing as far as possible the policy embarked on by the Dominion. The total net expenditure for the Naval defence vote 1924–25 is estimated at £330.465

ture for the Naval defence vote, 1924–25, is estimated at £330,465.

H.M.S. "Chatham" is being relieved by H.M.S. "Dunedin," a more modern oil-burning cruiser; and provision will require to be made for the entry and training of the young men who eventually will be required to man the second light cruiser.

The sum of £16,500 has been inserted in the estimates for the hire and upkeep of the oiler "Nucula," which has been provided by the Admiralty, this ship now being a necessity with an oil-burning cruiser on the station. It is also proposed to proceed with the erection, at a cost of £24,000, of two oil-fuel tanks, one of which was approved last year, but on which no money has been expended.

The contribution provided for the naval base at Singapore in 1923-24 was not expended, and, owing to the decision of the Imperial Government to incur no further expenditure on the scheme, an appropriation will not be required this year for the purpose; but if Parliament approves, a similar amount may be applied towards the cost of the second light cruiser recommended by the Admiralty.

WAR EXPENDITURE.

The gross expenditure from vote "War expenses" during the year ended 31st March, 1924, was £370,496, the principal items being £124,217 for the medical treatment of discharged soldiers for war disabilities, £110,808 on account of our liability for transport of troops, £12,182 towards erection of battlefield memorials in war areas, £31,952 towards cost of construction of cemeteries and war graves, £23,070 in connection with repatriation advances and expenses, and £68,267 for other miscellaneous war expenditure. Receipts from sales of surplus stores, medical stores, and other miscellaneous credits totalled £77,531, which with £133,834 received in repayment of repatriation loans left a net expenditure of £159,131 for the year.

The balance of claims from the Imperial Shipping Liquidation for troop-transport charges against New Zealand, amounting to £800,000 net, was recently received. As the result of close examination, these were reduced to approximately £200,000, and a progress-payment of £100,000 was made in March last. The

balance is provided for in this year's estimates.

The War Expenses Account will be closed at the end of the present financial year.

REPATRIATION.

Since the 31st December, 1922, the benefits under the Repatriation Act have been restricted to tubercular or other seriously disabled soldiers. Financial assistance paid out to such men during the twelve months ended 31st March, 1924, amounted to £17,379, making the total moneys advanced to soldiers by the Repatriation Department £2,371,831, of which sum £1,956,674 was by way of loan.

The major portion of the work—namely, the collection of loans outstanding—was transferred to the State Advances Office as from the 1st April, 1923, and the total repayments now amount to £1,412,973, being over 72 per cent. of the total loan advances. The complete transfer of this branch to the State Advances Office will be effected this year.

NATIVE TRUST OFFICE.

As the purposes for which the Native Trust Office was established are becoming more widely known among the Maoris they are taking increasing advantage of the facilities afforded to borrow moneys for the improvement of their lands. Last year 438 applications were dealt with, and £85,516 was advanced, making a total of £157,900 to date.

It was found possible during the year just ended to increase by $\frac{1}{2}$ per cent. the rate of interest on moneys held on behalf of beneficiaries, and this has given general satisfaction.

WESTERN SAMOA.

The trade of the Territory again suffered severely owing to the continuance of low prices and little demand for tropical products in the world's markets. One satisfactory feature, however, has been that, notwithstanding this depression, the export of copra during the period was the highest for many years past. It was almost double that of 1920, the total trade figures for which year constituted a record for Western Samoa. Since the beginning of the year prices have steadily risen, and are now satisfactory.

In the circumstances the revenue of the Territory, though well maintained, fell short of the expenditure, which has been much increased on account of extended and improved medical and educational services.

An additional grant of £6,000 is being provided to meet the deficit of 1923–24. The Administration has decided to offer the Crown Estates in sections by public tender, and it is anticipated that offers will be received for the greater part of the cultivated lands.

COOK ISLANDS AND NIUE.

The expenditure for 1923-24 was £17,446, being less than the amount voted (£18,713) by £1,267. The estimated amount to be voted for the year 1924-25 is

xiii B.—6.

£20,669, the increase over last year's appropriation being accounted for by grants for hospital and education purposes, a new freezing plant, and the installation of wireless systems at Mangaia and Niue.

This year radio-stations will be opened on the islands of Aitutaki and Mangaia, in the Lower Cook Group, and a radio-telephone station will be installed on the Island of Niue. These services will do much to remove the greatest handicap to the development of trade with these isolated communities. The future for trade and revenue is bright.

REVALUATION OF SOLDIER FARMS.

In conformity with the legislation passed last session authorizing the revaluation of soldier farms, a Dominion Revaluation Board was appointed, and twenty-three District Revaluation Committees set up. The duty of the Committees is to inspect and value the farms in their respective districts, and submit their reports to the central Board.

The field-work in some of the smaller districts has been finished, but it will be some time yet before the whole of the necessary inspections and valuations in the larger districts can be finalized.

The Board and the Committee are impressed with the urgent nature of this important work, and everything possible is being done to expedite early completion.

Recommendations are coming to hand, and in many cases mortgages have already been substantially reduced both as regards capital and interest liabilities, and substantial relief has also been afforded in the case of arrears.

It is the policy of the Government to give industrious men every possible chance, and there are already indications of a great improvement in soldiers' settlements.

DISCHARGED SOLDIERS SETTLEMENT.

From the inception of the scheme of the discharged soldiers settlement in 1915 to the end of the financial year advances have been made to discharged soldiers as follows:—

	Section 6, Discha on Current	rged Soldiers S Account (includ					
	of buildings			,			£
4,848	returned soldiers			• •	• •		4,386,000
		arged Soldiers ces towards pur d discharge of t	chase of	farms, n			
5,498	returned soldiers			• •	• •	• •	8,905,400
		narged Soldiers ces towards pur e of mortgages	rchase a	nd erection	on of dwe	ellings	
11,870	returned soldiers		• •	• •	• •	• •	8,572,100
22, 213	returned soldiers	••		••	• •		£21,863,500

During the period the mortgages have run, receipts from the sale of stock, wool, and other farm-produce, and repayment of loans under the instalment system, amount to £2,965,400. The receipts are 13.56 per cent. of the total capital advanced. The money received has been applied for the purpose of re-advances to purchase stock or improve properties, for loans on Current Account, and also to clear off liabilities contracted early in the year for the erection of dwellings.

The receipts for the year amount to £1,513,544, being the largest amount received to date in any one year. Of this sum £792,268 represents repayment of advances, while receipts in respect of interest and sundries total £721,276.

Arrears outstanding on interest and principal amount to £751,524, while the sum of £30,550 is outstanding as postponed instalments. The arrears of rent amount to £487,100.

In 1923–24 loans were granted to 629 soldiers, amounting to £585,300, of which £391,100 was granted to 507 soldiers for the erection of dwellings. The amount of £194,200 was advanced, principally for new loans on Current Account, to 122 settlers to assist them in improving and stocking their lands. The total expenditure for

housing, including liabilities from 1922–23, was £571,000.

A total of £1,196,400 was advanced to soldier settlers during the year; the difference between this figure and the loans authorized is made up mainly of outstanding liabilities in respect of loans authorized during the previous year, and readvances from the Current Account to stock and improve farms, which thus improves the Crown's position. In addition, £21,320 was expended on behalf of mortgagors, and £15,000 in settlement of claims from the previous financial year. Under the regulations the Department handles the bulk of the proceeds from farms, which may be reinvested for the purpose of replacing culled stock and the purchase of such additional stock as may be deemed necessary, as well as effecting further improvements to bring farms up to a more profitable condition. Until farms are fully improved and stocked it is anticipated that sums will be re-advanced as charges on the Current Account for at least two years.

The total amount involved in the settlement of discharged soldiers is as

STATE ADVANCES OFFICE.

The capital of the State Advances Office was increased by £3,114,750 in 1923–24, and since the 31st March, 1924, a further £2,300,000 has been borrowed, making the total capital of the Department at the 30th June, 1924, to be £24,483,525. 7,292 applicants received loans amounting to £6,205,686 in 1923–24. This constitutes a record since the State Advances Act was passed in 1894, and affords ample evidence of the assistance rendered to settlers and workers.

The Amendment Act of last session authorized loans to workers up to £1,250 and to settlers up to £3,500. To a worker desirous of purchasing a dwellinghouse an advance not exceeding 95 per cent. of the value of the security, in lieu of 75 per cent., was authorized, whilst to a worker electing to purchase a section and erect a dwellinghouse, authority was given to advance not exceeding 95 per cent. of the cost of the land, building, and improvements. Authority was given to advance to settlers 75 per cent. of the value of the security, in lieu of 60 per cent.

The new business for	the year was as	follows	:	Number.	Amount. £
Loans granted to	settlers			6,194	5,416,987
Loans granted to		• •		3,260	2,204,410
Loans granted to	local authorities			194	444,805
					-
	Totals	• •	• •	9,648	£8,066,202

В.—6.

For the purpose of building houses and acquiring homes a large sum has been advanced during the last five years. The following is a table of the loans authorized from the 1st April, 1919, to the 31st March, 1924:—

XY

For housing purposes—				Number.	$egin{array}{c} \mathbf{Amount.} \\ \mathbf{\pounds} \end{array}$
To settlers				 5,778	3,193,143
To workers				 9,037	5,122,944
To release mortgages on	. house pro	operties—	•		
To settlers		•		 2,010	1,033,428
To erect workers' dwelli	ngs				
To local authorities	• • •	• •		 • •	577,195
То	otals	. • •	• •	 16,825	£9,926,710

For the purpose of assisting borrowers to repay mortgages a considerable sum has been advanced. Since the month of October, 1922, when it was decided to entertain such applications, loans have been granted to 3,549 applicants, amounting to £3,584,205.

Amounts advanced by Department during the following financial years:—

	Year ending 31st March,				To Workers.	To Local Authorities.	Total Advances
			£	£	£	£	
1914	• •		978,395	272,860	324,150	1, 575,4 05

	Totals		11,761,165	5,171,561	3,971,585	20,904,311	

The following advances were made for the three months ended 30th June, 1924:—

			£
Settlers			561,350
Workers		 	475,360
Local authorities		 	69,925
Total	• •	 	£1,106,635

The temporary investment by the State Advances Office of floating cash balances, which for the time being could not be profitably employed, has been authorized by the different Finance Ministers since 1896. The object is a perfectly sound one. The State Advances Office, having moneys not immediately issuable, temporarily invests them and realizes the securities as cash is required. This is precisely what happened during the war period, when labour and material were not available. The investments outstanding at the end of 1919–20 were, during the period of reconstruction, speedily converted into cash for advances to local authorities, settlers, and workers, and by the end of 1923–24 had been wholly realized. These transactions are in no way connected with the new capital, £2,600,000, provided during 1923–24.

From 1914–15 and onwards a large portion of these temporary investments was held in Imperial securities, the total holding of which in 1917–18 was £1,409,794.

HOUSING.

The housing shortage which has prevailed for some years, particularly in those urban areas where the increase in dwellings has not kept pace with the increase in population, has received the fullest possible consideration. The following indicate the large sums of money that were made available for the erection and purchase of homes during the financial year 1923–24:—

C	•		Number.	$ \begin{array}{c} \mathbf{Amount.} \\ \mathbf{\pounds} \end{array} $
State advances	 		 4,481	3,291,609

^{*} Excluding amounts advanced to release mortgages on house property.

In addition, considerable sums, approximating £13,000,000, were advanced by way of mortgage during the same period by Government lending Departments—viz., State Advances, £5,000,000; Public Trustee, £7,000,000; and other lending Departments, £1,000,000—some proportion of which total was required either to complete buildings in course of erection or to purchase others recently erected, the cost of which had been temporarily financed in anticipation of a Government loan.

GOVERNMENT INSURANCE DEPARTMENT (LIFE AND ACCIDENT).

The operations of the Life Branch of this Department during the last year have been most satisfactory. The new business amounted to £1,581,722, and the number of policies in force at the 31st December, 1923, was 60,545, representing a total insurance, with bonus additions, of £17,906,612.

The total income was £814,638, and the excess of income over expenditure is the largest in the history of the Department, amounting to £223,872. At the end of the year the Life Fund stood at £6,222,484.

A favourable position was disclosed as a result of the triennial actuarial valuation as at 31st December. The valuation has not only been made on a most stringent basis, but it has been found possible to declare very markedly increased bonuses, the increase in the main tables being more than 25 per cent. The actuarial basis upon which the Department now stands is more solid than that of the majority of the best private offices, and constitutes a sound guarantee for future progress.

A good year was also experienced by the Accident Branch. The premium income was £35,267, being an increase of £1,920 over the previous year, and the interest income, £6,207, after deducting taxes, establishes a record. Notwithstanding the fact that the claims have been heavier than usual, the funds have increased by £8,020. The Statutory Reserve Fund is now £115,020, and the Accident Funds amount to £29,089, the two together being £144,109.

NATIVE.

During the year 29,560 acres of Native land were purchased for the Crown, at a cost of £206,385. The gross area of Native land acquired by Crown purchase since 1910 is 1,328,283 acres, for which £3,218,576 was paid. The figures comprise land purchased for European lessees, which includes interests in the various Native townships, the purchase-money of which is being recouped by the tenants. This accounts for a higher average cost than usual. The receipts by the Native Land Courts and Maor Land Boards for fees and commission totalled £16,009, as against £13,913 for the previous year.

PUBLIC TRUST OFFICE.

The value of estates and funds actually under the control of the Public Trustee on the 31st March, 1924, was £32,404,724. This represents an increase of £3,499,926 for the financial year.

The new estates accepted for administration during the year numbered 2,739, with assets of a total value of £3,781,155. The administration of 478 of these new estates was completed before 31st March, 1924, while 1,574 others were also closed—the total value being £1,108,254.

The rates of commission were reduced from the 1st April, 1923, and also made inclusive of certain fees previously charged to the estates, and there is no doubt that the volume of new business has been increased as a result.

The investments held on the 31st March, 1924, on behalf of the Common Fund and on behalf of estates and funds, the moneys of which are specially invested, amounted to £19,895,285, made up as follows:—

				£
Mortgages				12,997,242
Local bodies' debentures				5,079,135
Government securities				1,364,543
Land Settlement Finance Act	debent	ures		55,698
Fixed deposits with banks				7,062
Private debentures and shares	s in con	panies		4,943
Overdrafts by way of advan	nces to	estates a	nd to	
beneficiaries				315,203
Properties acquired by forecle	sure			71,459
				£19,895,285

Of this sum the total advances made during the year amounted to £2,198,185, made up as follows:—

				£
Mortgages		• •	 	1,422,870
Local bodies' debentures			 	438,745
Government securities .	•	• •	 	336,570
				£2,198,185

AGRICULTURE,

The dry summer to a certain extent reduced the production of grass, cereals, and fodder crops, and as a consequence the output of butter was somewhat affected, but nevertheless the total value of the dairy-produce of all kinds exported during the year was well ahead of that for the previous year, the respective figures being £18,576,474 and £16,207,053. The importance to the country of the dairy industry is well illustrated by the fact of its exportable surplus being valued at over 18½ millions sterling.

The wool-clip for the 1923-24 season was good, and in clean condition, and a marked continuous increase in prices was maintained throughout the series of sales,

iii—B. 6.

B.—6. xviii

the average price for the season being 16d. per pound, against $10\frac{1}{2}$ d. for the previous The declared value of the wool exported was £15,265,264, as compared with £11,955,567 for the previous period. The greater portion of the whole clip was sold at the local auctions, consequently the proceeds were promptly available to growers.

It is very satisfactory to record a substantial increase in the number of cattle and sheep in the Dominion, and also an addition to the number of pigs. In cattle the increase is almost wholly in the dairy classes, and in sheep largely in the breedingewes. In both these directions a further increase may be expected. of all live-stock has been good.

Lamb and mutton have realized very satisfactory prices during the year, especially lamb, and the prospects for a continuance of good returns are encouraging. The need of maintaining our export meat at the best standard of quality must never be lost sight of.

Trial shipments of eggs to the London market during the year were successful.

Trial shipments of eggs to the London market during the year were successful.

and should lead to a development of this trade in the near future.

The quantity and value of the exports of the undermentioned products were as follows, the total value under these headings showing an increase of over six million pounds for the year:—

	•				Quantity.	Value. £
Beef (frozen and sal	Ited)				712,533 cwt.	844,187
Mutton and lamb (c	earcases)				6,328,871	8,615,619
Other meats (includ	ling bacon	and por	rk)		• •	382,249
Tallow	••	••			26,358 tons	852,471
Casings					2,755,845 lb.	507,819
Sheep-skins (woolly) and pelts				9,127,383	1,294,855
Hides and skins	••				999,181	774,125
Rabbit-skins					14,951,746	493,708
Live-stock						106,430
Other miscellaneous	items					33,811
Wool (bales)	• •				736,713	15,265,264
Dairy-produce	• •	••	••	••	••	18,576,474
						£47,747,012

Owing to a reduction in the areas sown, and to unfavourable weather conditions during the growing-period, the production of wheat and oats shows a decrease, and it will be necessary to import wheat and oats to the value of £1,250,000 before next season's harvest is ready.

The quantity of phormium hemp graded during the year shows an increase of nearly 6,000 bales. It is still necessary for millers to give greater attention to

the output of fibre of a better and more uniform quality.

The prospects of the fruit industry are improving. The substantial assistance granted to growers by the Government guarantee of a penny per pound net return on fruit exported, and by the help afforded in other directions, has The exports for the year were not improved the conditions of the industry. far short of 150,000 cases, and for the current season will show an increase to over 240,000.

The export of honey is now well established, although the figures for the past year show a decrease, due mainly to unfavourable weather conditions having reduced the season's production.

The prospects of the pastoral, agricultural, and horticultural industries of the Dominion were never better than at present, and this, in conjunction with the high degree of intelligence and industry for which our rural population is noted,

give very substantial ground for confidence in the future of the Dominion.

For the purpose of providing young men who intend to follow agricultural and pastoral pursuits with better opportunities for acquiring up-to-date and scientific knowledge by which production may be increased, it is intended to give Government support and assistance to the establishment of at least one, and later on possibly two, agricultural colleges under trained and competent instructors. The necessary equipment will be provided to enable our farmers to compete successfully with other countries which are apparently endeavouring even now to capture the markets of the world so far as agricultural and pastoral products are concerned.

PENSIONS.

The following payments were made during the year ended 31st March, 1924:—

				£
War pensions .:		• •		 1,306,652
Old-age pensions				 765,392*
Widows' pensions				 202,364

				_
				£2,405,221

WAR PENSIONS.

The total of the actual payments made in respect of war pensions to the 31st March, 1924, is £10,139,996.

The annual liability in respect of each class of war pension at the close of the year is shown in the following table:-

Class of Pension.			Number of Pensions.	Annual Value.	Average Pension.
Soldiers (permanent)			6,784 7,731 807* 1,977† 5,867‡	£ 333,946 407,847 62,916 203,342 205,075 £1,213,126	£ 49 53 78 103 35 £52

^{*} Covers 1,208 children.

The amended War Pensions Act passed last session provided for a War Pensions Appeal Board and the payment of economic pensions.

Of 300 appeals, 144 were dismissed and 121 upheld, the remainder being in There are still some 400 appeals to be abeyance or otherwise dealt with. disposed of.

In regard to economic pensions, 924 claims were established between the 1st September, 1923, and the 31st March, 1924. These, with the 1,343 cases already in receipt of supplementary pensions when the Act was passed, made a total of 2,267 grants under this head, the annual value of which totalled £132,288.

SUPERANNUATION.

The subsidies and contributions of the three funds for the year were as follows:-

		Subsidies.	Contributions by Employees.
		£	£
Public Service		 136,000	228,000
Teachers	• •	 68,000	102,000
Railways		 125,000	133,000
		£329,000	£463,000

^{*} Includes £33,338 expended from national-endowment revenue. † Includes £3,499 gold duty collected under Miner's Phthisis Act, 1915.

[†] Covers 2,138 children.

[‡] Covers 31 children.

Since the inauguration of the three funds the State has paid in subsidies £2,100,000, while the employees' contributions during the same period amounted to £5,000,000.

The requirements for the current year are: Public Service Fund, £136,000; Railways, £170,000; Teachers', £68,000: total, £374,000.

PUBLIC SERVICE FUND.

The total number of contributors on the 31st March last was 15,021, and the total revenue for the financial year was £475,166, including members' contributions £228,313, interest on investments £110,146, and Government subsidy £136,000, including a special payment of £50,000 in addition to the annual charge of £86,000. The total amount expended during the financial year was £300,489, which comprised retiring and other allowances £240,611, refunds of contributions £53,722, cost of administration £6,156. The total number of allowances existing at the end of the year was 2,356, representing an aggregate annual payment of £251,988. The amount of the total fund invested on the 31st March last was £2,007,766.

GOVERNMENT RAILWAYS FUND.

At the 31st March, 1924, the fund amounted to £671,827, an increase of £87,608 for the year. The receipts were: Contributions, £133,148; interest, £28,565; Government subsidy, £125,000, inclusive of a special payment of £50,000 in addition to the voted amount of £75,000; fines and donations, £437: total, £287,150. The expenditure from the fund amounted to £199,542, including retiring-allowances, amounting to £157,238.

TEACHERS' FUND.

This fund amounted on the 31st January, 1924, to £858,662, an increase of £79,026 for the year. The revenue for the period was £214,190, including contributions £101,632, and interest £48,725. The Government annual subsidy is £68,000. The expenditure for the year amounted to £135,164, including retiring-allowances £112,861, and refund of contributions £19,179.

COST-OF-LIVING BONUS TO ANNUITANTS.

The cost-of-living bonus to Public Service annuitants in receipt of less than £100 per annum involved an expenditure in 1923–24 of £40,019, and you will be asked to make similar provision this year. The present bonus payment of £13 to widows in addition to the annuity of £18 per annum, and also the additional £13 for each child, is being made permanent.

NATIONAL PROVIDENT FUND.

The membership of the fund at the 31st December was 23,200, the contribution income £143,000, the State subsidy on contributions being £36,430. The accumulated fund was £980,000, an increase of £190,000. The sum of £15,000 was paid out during the year in allowances to annuitants and to widows and children. An amount of £40,000 was paid by the State through the fund by way of maternity allowances—£7,000 to contributors and £33,000 to members of approved friendly societies.

LAND-SETTLEMENT.

Approximately 380,636 acres, subdivided in 977 holdings, and comprising practically every class of land, were opened for selection during the past year; whilst, excluding miscellaneous leases, approximately 459,289 acres of Crown, settlement, and national-endowment lands and reserves, subdivided into 942 sections, were taken up during the same period. The miscellaneous leases issued during the same period numbered 1,148 holdings, comprising an area of 59,190 acres. The subdivisions of Mount Pisa Run were all disposed of, and the Teviot sections and runs are open for selection.

xxi B.-6.

At the present time there is an area of about 508,000 acres available for settlement.

Some 12,087 acres were set apart for selection by discharged soldiers during the year. The policy is now, however, to open practically all lands for general application. Proclamations were issued during the year revoking the setting-apart for discharged soldiers of an area of 64,044 acres in order that the lands could be so re-offered.

The principal officers of the Lands Department are at present very fully occupied in connection with the pressing duty of revaluing discharged-soldier settlers' holdings. On the completion of this important work they will again concentrate on the Government's policy of vigorously promoting land-settlement, especially in making adequate provision for the youths who have reached manhood since the conclusion of the war. There are many such who are both capable and desirous of acquiring land and taking an active part in the settlement of their country.

LAND-DRAINAGE.

The various land-reclamation projects under construction have been energetically prosecuted throughout the year, and with the aid of the recently imported

excavating machinery much work has been accomplished.

On the Hauraki Plains some 43,000 acres have been reclaimed and settled in small areas. This settlement has been, as a whole, most successful, and is now one of the most prosperous dairying centres in the Dominion. The capital value of the reclaimed portion of the plains to-day is in the vicinity of £2,000,000.

Works on the Rangitaiki area, which comprises some 90,000 acres, are on the verge of completion. The output of dairy-products in this district is steadily increasing.

At Kaitaia, where an area of 20,000 acres of swamp country is under develop-

ment, the works are well forward.

The Waihi Swamp, 11,000 acres, should be reclaimed within two years. Of the Crown area some 1,700 acres have been or are about to be opened for selection, and the balance, which is particularly low-lying, is being developed with a view to disposal for flax-cultivation.

Extensive exploration surveys of the swamp areas in the vicinity of Hamilton are now in hand, and from the information available it appears that there is a

big field for future development in that locality.

IRRIGATION.

The large sum of £95,466 was expended on irrigation-works for the year just ended, and considerable areas of land were brought into intensive cultivation. The localities operated on included, amongst others, Ida Valley, Tarras, Ardgour, Roxburgh, and Manuherikia Valley.

To encourage settlement the rates charged to the farmers are levied on a graduated scale, commencing at a low figure for the first year, and rising to the maximum in the fifth year, the object being to avoid unduly harrassing the settler when the calls upon his capital are greatest—i.e., when he is developing the land.

It is proposed to proceed actively with the undertakings now under construction, and other works will be inaugurated as the land relating to schemes already completed is taken up.

As the actual irrigation proceeds the necessity for drainage-works to carry off surplus waters becomes evident, and will be attended to as required. To minimize this work constant propaganda against water waste is being carried on.

KAURI-GUM INDUSTRY.

In 1923-24 a large volume of business has been done in the industry. The Department's sales for the year amounted to £23,000, whilst purchases were made to the amount of £6,500. Buying was carried on only in districts where acute

distress existed and with a view to tiding the diggers over temporary difficulties. As private buyers commenced to operate the Department ceased making purchases for the time being.

DEPARTMENT OF HEALTH.

The subsidies payable to Hospital Boards for 1923-24 were £415,126, the actual amount paid being £412,945. It is estimated that an appropriation of £510,000 will be required for the year 1924-25, about £60,000 of which will be due to the new subsidy rates under the Act of 1923, and to the anticipated increase in proposed capital expenditure. It is expected that the relief to be afforded to the rates by the new subsidy scheme will enable Boards to meet capital expenditure by levy and subsidy rather than by loans.

The net expenditure of the Department from the Consolidated Fund, other than subsidies, was £77,901 less than the amount appropriated. Considerable further savings were effected in the administrative cost of the institutions taken over from the Defence Department, apart from the saving effected by the closing of the Trentham Hospital, while recoveries considerably exceeded the estimates, particularly in regard to the collection of patients' fees. The amount asked for this year is £8,027 less than that appropriated last year.

MINING.

The value of the minerals, other than kauri-gum and coal, produced during 1923 was £1,118,412, as against £903,259 for the previous year, an increase of £215,153, principally due to the increase of £162,182 in the production of gold and silver bullion.

The quantity of coal produced during 1923 was 1,969,834 tons, an advance of 112,015 tons over the production of the previous year.

In the past year 8,678 persons were employed in the metal-mines, coal-mines, and stone-quarries of the Dominion, an increase of 648 over the number employed during the year 1922.

The output of coal from the State collieries for 1923 was 151,403 tons, as against 123,531 tons for 1922, an increase of 27,872 tons. The greater part of this increase is from the James State Mine, which has now reached the productive stage. The indications are that the State coal-mines accounts will show a satisfactory profit.

FREE-OF-INCOME-TAX SECURITIES.

By means of redemptions, conversions, cancellations, and renewals a further reduction has been made in these securities, the amount so reduced in the past financial year being £3,265,355, the total holding now standing at £40,990,645. The amount held in 1921–22 was £51,733,405, so that the substantial reduction of £10,742,760 has been brought about.

The amount paid for the purchase below par of these securities from the public from July, 1922, to 31st March, 1924, was £695,468, showing a net profit of £21,662.

CONTROL OF CREDITS IN AID OF EXPENDITURE.

Last session the Public Revenues Act was amended in the direction of providing that the total amount of receipts applied in aid of the gross expenditure of a vote must be limited by the amount of the estimated receipts shown in the estimates. Previously a Department having an excess of receipts was enabled to utilize them to the full extent, thus exceeding the appropriation made by Parliament. The change has improved parliamentary control, and tends to economy. If Departments fail to realize their estimated receipts, the shortage can only be made good either by reducing expenditure or by obtaining parliamentary authority for the deficiency. As a result, some slight alteration has been made in the form of the estimates of expenditure for the current year, in which the amount of expected credits is shown in reduction of the gross estimated expenditure of each vote. The expenditure of a vote must not exceed the net amount, plus the amount actually realized by the credits-in-aid, but may not exceed the amount so appropriated. This means that Parliament authorizes the appropriation of credits-in-aid up to the amount stated in the annual estimates, and that

xxiii B.—6.

expenditure cannot therefore exceed the amount voted, even if credits in excess of the estimate are received.

INSURANCE OF PUBLIC BUILDINGS.

The claims against the Fire Insurance Fund for 1923–24 were £14,018, as against receipts amounting to £12,503, thus reducing the balance of the fund from £46,825 at 1st April, 1923, to £45,310. The fund was established in 1913 for the purpose of the rebuilding or restoration of public buildings destroyed or damaged by fire. The receipts were the annual contribution of £10,000 from the Consolidated Fund, and £2,503 interest credited by the Public Trustee. The large number of fire losses in respect of school buildings accounted for £12,490 of the claims, and only £1,528 was required for other buildings.

DEPARTMENTAL BALANCE-SHEETS.

Owing to the early closing of the session last year a sufficient number of departmental balance-sheets in commercial form was not available for presentation before the House rose. These, however, are being submitted to honourable members this session, and similar accounts for the year ended 31st March, 1924, will be laid before you later.

The publication of these balance-sheets has resulted in improved methods being adopted for the recording of assets and their disposition, and a more clearly defined procedure as regards the charging of expenditure against either capital or revenue. The examination of these accounts has also ensured that no losses are written off unless parliamentary authority is obtained.

This reform is having a marked effect on the control of expenditure, Departments now being faced with the results of their estimates and decisions. Parliament, with these balance-sheets before it, should be in a better position to ensure effective results from the expenditure it authorizes.

PUBLIC DEBT.

	$\mathbf{Gross.}$	Sinking Funds.	Net Debt.
	£	£	£
31st March, 1922	219,054,385	10,655,394	208,398,991
31st March, 1923	218,953,324	11,879,256	207,074,068
31st March, 1924	221,616,361	12,974,028	208,642,333

In 1922–23 the net debt showed a decrease of £1,324,923, notwithstanding the fact that £5,234,818 had been borrowed and expended for public works and other purposes. I have pleasure in recording that the operations of the year 1923–24 disclose a somewhat similar result. The sum of £2,679,450 was loaned out of the accumulated surpluses and other accounts to the State Advances Office, and as the securities issued by that Office are charged against the debt an increase is therefore disclosed by the accounts. If, however, this amount is excluded the gross debt shows a decrease of £16,413, added to which sinking-fund contributions and accretions amounting to £1,094,772 reduce the net debt by £1,111,185, although £4,600,000 was borrowed for works and settlement purposes.

The debt operations for the year 1923-24 may be summarized thus:—

Decrease in net debt for 1923–24, exclusion borrowed for State Advances purposes.		mount	£1,111,185
Net debt at 31st March, 1924 Net debt at 31st March, 1923	••	••	$205,962,883 \\ 207,074,068 \\$
Net debt at 31st March, 1924 Less increase in State Advances	debt	• •	$208,642,333 \\ 2,679,450$
Gross debt, 31st March, 1924 Accrued sinking fund	••	•••	221,616,361 12,974,028

The amount raised for all purposes, including redemptions, totalled £15,264,502, loans aggregating £12,601,465 being redeemed, £4,656,955 being provided by cash and £7,944,510 by the issue of fresh securities.

The amount of £15,264,502 was raised for the following purposes:—

Public Works Fund—			£

^{*} Does not include charges and expenses of raising loans.

REDEMPTIONS AND RENEWALS.

The loans which matured during the year amounted to £13,570,015, to which must be added £5,560 matured loans for which debentures had not been presented up to the 31st March, 1923, making a total of £13,575,575. Of this sum, securities amounting to £7,173,675 were redeemed (not including redemption of Imperial funded debt), and £6,397,965 renewed at rates of interest varying from 4 to 5 per cent., leaving £3,935 unpresented.

In addition to the redemption of securities at maturity—viz., £7,173,675—other securities totalling £5,427,790 were redeemed as under:—

WAR DEBT.

By the purchase of free-of-income-tax securities, the application of capital repayments to redemption purposes and Imperial debt repayments, the net war debt shows a reduction during the past three years of £6,279,673. The reductions represent a decrease in the annual interest and sinking-fund charges of £160,276.

Year ended 31st March.	Gross War Debt.	Sinking Fund accrued.	Net War Debt.	Decrease in Net Debt.

PUBLIC-DEBT EXTINCTION.

The cost of the public debt is an outstanding problem in every country, especially in those that have war debts, the charges and repayment of which must be met out of revenue. A reduction in the charges of the debt lightens the annual burden and should be coincident with a reduction in taxation.

In Great Britain since the Armistice there have been some very substantial surpluses—viz., £45,700,000 in 1921–22, £101,500,000 in 1922–23, and £48,000,000 in 1923–24. The British Government has steadily adhered to the application of surpluses for debt-reduction. New Zealand being in process of development and therefore a borrowing country, the Government thought it better to use the surpluses for revenue-earning purposes in the way of development rather than for reduction of debt.

It is intended to proceed with the Public Debt Extinction Bill introduced last session, but which was, in view of the great importance of the proposals it contained, held over to afford honourable members ample opportunity to make themselves thoroughly familiar with its provisions.

The Bill proposes to substitute a regular and definite programme for reducing the public debt, instead of continuing to pile up an asset of funds which is not readily available, and which eventually may occasion financial embarrassment.

The safe-keeping of the accrued sinking funds is adequately provided for. They will be preserved intact, but the interest they earn is to be added to other funds available for public-debt reduction, and will be applied annually to that purpose and no other.

There is nothing in the Bill which will prevent the continued application of surplus revenue to debt-reduction purposes for which provision was made in section 24 of the Finance Act of 1921–22.

FUNDED DEBT.

Payments amounting to £1,651,930 have been made during 1923-24 in respect of £27,532,164, loans advanced by the Imperial Government, and which were funded in terms of the agreement dated 6th September, 1922.

The half-yearly payments represent both principal and interest, and the following table shows how the debt has been reduced to £27,098,029 at the 31st March, 1924:—

h	t paid.	Interest.	Principal.	Balance of Debt outstanding.			
1st December, 1922 1st June, 1923 1st December, 1923	••			••	£ 684,794 681,282 677,684	£ 141,171 144,683 148,281	£ 27,390,993 27,246,310 27,098,029

The sum of £20,000 has been received from the Imperial Government, being proceeds of sale of material when the battle-cruiser H.M.S. "New Zealand" was broken up. As the original funded debt includes an amount of £963,131, part of the Naval Defence loan raised for the purpose of building this battle-cruiser, it is proposed to apply the £20,000 towards reducing the debt. A further sum of £180,000 has been received from the Public Trustee on account of sinking fund on the same loan, so that a total of £200,000 will be utilized for further reduction of the Imperial funded debt. In terms of the agreement the New Zealand Government has the right at any time, on giving three months' notice, to repay at par any part of the principal. Any such repayment, however, does not affect the amount of the total annual payment of £1,651,930, which continues unchanged until the whole of the principal is repaid, but the outstanding debt is reduced by each repayment.

There is a possibility that I may be able to arrange a reduction in the annual charges as interest rates become easier.

LOANS FALLING DUE.

Loans falling due during the seven years ending with the year 1931, excluding Imperial debt repayments, are,—

BANK OF NEW ZEALAND.

The following dividends were received from the Bank of New Zealand during the year 1923-24:—

On the 1st October, 1923, the bank increased its share capital by £1,125,000. In terms of section 12 of the Bank of New Zealand Act, 1920, one-third of the new issue was in preference "B" shares, over which the Government had the first option of purchase.

B.-6.

Authority was obtained in section 8 of the Finance Act, 1923, to purchase 375,000 preference "B" shares at par out of the Consolidated Fund, and part of the accumulated surpluses was used for the purpose. This brings up the total holding of "B" preference shares to 1,000,000, which at present market-price equals a value of approximately £2,600,000. The total amount of cash invested in Bank of New Zealand shares is now £1,250,000, and the Government holdings are,—

If the bank's profits continue at present rates, the total shares "A" and "B" will earn an annual dividend of £162,500—an increase of £50,000 over the dividend paid on the holding prior to the acquisition of the new shares last year.

PUBLIC SERVICE.

For some time past the question of generally extending the fortnightly payment of salaries and wages of State employees to the whole of the Public Service has been under consideration.

This system has already been introduced in several branches of the Service, notably the Government Railways, Post Office, and Government Printing Office, but its extension had to be delayed on account of the increased administrative cost involved. It has now been decided to generally adopt the bi-monthly system, a concession which will doubtless be appreciated by the lower-salaried employees.

STORES CONTROL BOARD.

The total expenditure on stores for the year was, in round figures, £4,080,000. With the exception of a few small lines urgently required, tenders or quotations were invited for the whole of the stores purchased.

The standardization of stores in common use by Departments has been proceeded with, and general contracts for the standardized article or line have been arranged with satisfactory results. It is found that merchants and manufacturers are prepared to quote exceptionally good terms and render the best service to a central authority which can make binding contracts on behalf of the whole of the Government Departments. The Board's effort in this direction has been limited by a continuance of unstable markets, but the policy will be steadily pursued and extended as opportunities arise.

The disposal of surplus and obsolete stores has been reviewed and placed on a much more satisfactory basis. Departments are now required to obtain the Board's authority before effecting a sale. In practically all cases an expert valuation is made, and the Treasury and Audit are advised of the prices fixed.

SHIPPING CHARGES.

The method of shipping material and stores for Government Departments from the United Kingdom has been reviewed and reorganized. As the result of an agreement arrived at with the shipping companies an annual saving in freight charges of about £5,000 has been effected.

It is estimated that the action which is now being taken in connection with the marine insurance cover on such material and stores will further reduce the total cost of imported goods by not less than £2,000 annually.

DISTRICT TREASURY OFFICES.

In accordance with the policy announced in 1920, District Treasury Offices have now been established in Auckland, Christchurch, and Dunedin. The ability to settle claims locally without delay is proving a distinct advantage to the Government and a convenience to the public. A concurrent audit is in operation in these offices.

The establishment of these offices renders it necessary to ask that the imprest for general services should be raised from £100,000 to £150,000. The system

B.—6. xxx

enables prompt payment of accounts locally, and consequently the State receives the usual trade discounts, the volume of which justifies the enlarged cash advance.

The amount of the present imprest was fixed in 1916, when the Treasury Cashier at Wellington was practically the sole imprestee for general payments.

EXCHANGES.

The present cost of transferring money from the United Kingdom to New Zealand is tending to create social and economic difficulties, particularly affecting our producers, who are subject to a heavy impost by the high "selling" rate in London. The set-off in the shape of an easy "buying" rate is of doubtful utility, as it tends to encourage over-importing and to have a detrimental effect upon our secondary industries.

The matter of exchange was considered at the recent Imperial Conference, when the highest experts examined proposals for surmounting the difficulties. The danger of adopting palliatives that, however advantageous they may be temporarily, might lead to other anomalies was recognized, and the Conference adopted the suggestion that the respective countries should establish central or federal banks, and by clearing and co-operation bring about an easing of the position. The traders in Great Britain have recently taken the matter up again, and I shall be glad to assist in any step that will lead to an exploration by the Governments concerned as to the actual causes of the abnormal position now obtaining, upon which experts do not seem to agree.

The Imperial Economic Conference adopted and endorsed the following resolution submitted to them by the Committee on inter-Imperial exchanges: "That, arising as they do from the suspension of an effective gold standard, the difficulties of inter-Imperial exchange will disappear when the currencies of Great Britain and

the Dominions affected are again made convertible into gold."

THE IMPERIAL ECONOMIC CONFERENCE.

The Imperial Economic Conference which was held last year, commencing on the 1st October, was of great importance in itself, but the results so far as they have gone have been very disappointing. I am referring particularly to the subject of Empire preference, which was the principal business dealt with on the economic side of the Conference. I do not think any one who has looked into this question can come to any other conclusion than that a well-thought-out scheme of preference as between British countries would be of immense benefit to the whole Empire; and by preference" I mean a drawing-nearer commercially and industrially of the nations within the Empire for their mutual benefit and advantage, and at the same time the strengthening of Imperial ties. I have no hesitation in saying that with the encouragement given by a reasonable policy of preference, in a comparatively short period the Dominions would be able to produce practically all the commodities which the United Kingdom requires, but which it cannot produce for itself. policy the sparsely peopled territories of the Empire would gradually be brought into use and occupation, and become the homes of numbers of British citizens, who would otherwise be attracted to countries not under the British flag. countries could take no exception to such an arrangement, because they are most of them doing something of the sort for themselves. A policy of preference would undoubtedly increase inter-Imperial trade, increase production, and increase the demand for labour. Surely it is in the interest of British citizens to develop trade within the Empire rather than trade without the Empire. I do not say that we should have no dealings with people outside the Empire—that would be absurd; but I do say that the encouragement of our own industries and the development of our own resources should be our first consideration.

THE MORATORIUM.

The effects of the post-war boom have not entirely disappeared. A number of people who bought land at prices beyond its value and left a very large proportion of the purchase-money on mortgage find, now that prices of most of the primary products have fallen somewhat, serious difficulties in paying their way and making ends meet. The problem of enabling such people to regain their financial stability is one not easy of solution, though in many deserving cases where the mortgager is an industrious and energetic man mortgagees have met the

хххі В.—6.

difficulty by accepting a share of the responsibility and writing off part of the indebtedness. This is the proper thing to do. Unfortunately, there are sometimes faults on both sides, and it becomes impossible to make any arrangement to which both parties will agree. The Government has assisted and will assist struggling settlers wherever it is possible to do so, but it cannot encourage breaches of agreements lawfully entered into. There is some satisfaction, however, in knowing that these difficulties are gradually adjusting themselves and that on the whole production is being well maintained.

The Mortgages Extension Act will cease to operate on the 31st December next. Under this Act the mortgagee can apply to the Supreme Court for exemption from the restrictions on the enforcement of his rights, and the Court, having considered the effect of continuance on the security, the ability or otherwise to redeem, and the question of hardship generally, is empowered to grant relief under special

circumstances.

The legislation just introduced will, if passed, have the effect of putting the law the other way about, so that the mortgagor may go to the Supreme Court, and, where he is able to prove to the satisfaction of the Judge in Chambers that actual hardship will otherwise ensue, the Court will be empowered to grant a limited extension. Otherwise the moratorium will be lifted as from the 1st January, 1925.

REDUCTION IN TAXATION.

The all-important question of taxation has continued to receive careful and detailed consideration. In pursuance of the policy the Government has adopted, of gradually reducing taxation as conditions permitted, you will again be asked to approve of further remissions. These will be adjusted in such a manner as to give the greatest relief to all classes of the community, and at the same time to stimulate the productive powers of the Dominion.

On the present basis of taxation the revenue for the current year would probably produce £28,857,620, whilst the expenditure is estimated at £27,505,060, leaving a credit balance of £1,352,560. The remissions granted last year are valued at £1,200,000, and this year, after providing for interest and debt-reduction charges, as well as for the efficient and economical administration of Departments and services, I hope to be able to ask Parliament to reduce the burden of taxation by about £1,000,000, particulars of which will be supplied in the legislation dealing with the subject. I must, however, again remind those who, indifferent as to cost, and unable to say where the money is to come from, clamour in one voice for increased expenditure and a reduction in taxation that they cannot have both. I quite recognize that, as the population grows and the national wealth increases, the expenses of Government, no matter how economically administered, must expand, but that expansion must not be greater than the increase in income. There should be a sufficient margin to ensure safe finance and to provide some contribution towards reducing the dead-weight of our war debt—one of the best means of easing the taxpayer.

PROGRESS OF THE DOMINION.

It is now opportune to review the decade that has just passed and note the progress made by the Dominion. The period covers the Great War, on account of which, both during its continuance and since, the Dominion has passed through greater economic difficulties than ever before in its history.

The position to-day will be seen from Table No. 7, which accompanies this statement. Such progress as is evidenced by the various figures given could not

have been achieved without prudent and careful administration.

During the period the population has increased by 18 per cent. The total trade, which per head of population is the highest in the world, increased by £50,271,277, or 110 per cent. Export of wool increased in volume 17 per cent. and in value 35 per cent.; frozen meat, 18 per cent. in volume and 103 per cent. in value; butter, by 236 per cent. in volume and 418 per cent. in value; cheese, by 136 per cent. in volume and 288 per cent. in value. In addition to encouraging the primary industries the Government has not been unmindful of the smaller industries. The exports of apples increased in volume by 295 per cent. and in value by 512 per cent., whilst in the case of honey the increase in volume was 375 per cent., and in value 624 per cent. Every assistance is being given to these producers to establish an export market for their commodities. The total exports for the

B.—6. xxxii

year ended 31st March, 1914, were £23,471,246, but for the year ended 31st March, 1924, they were no less than £51,652,606—an increase of £28,181,360, or

120 per cent.

These figures are a tribute to the productivity of New Zealand, and also an indication of the increasing prosperity of its people. The solicitude of the Government is borne out by the greatly increased social services afforded, as evidenced by the expenditure for education and public health, and in free pensions. The salaries and wages of public employees have increased from an average of £162·40 to £245·744.

New Zealand has led in the reintroduction of the penny post, and increased facilities are being provided for every section through the Post and Telegraph Department. There are now 4,174 more miles of telegraph and telephone lines than in 1914, being an increase of 27 per cent. during the period, and telegraph and telephone wire used increased by 156,990 miles, or 127 per cent. In 1914 there were 37,486 telephone subscribers, as compared with 85,031 in 1924—an increase of 47,545, or 127 per cent.

The progressive policy pursued in opening up the country and improving the means of communication is confirmed by the expenditure on roads and bridges, which in 1914 was £353,836, while in 1924 it was £749,737, being an increase of

£395,901, or 112 per cent.

During the decade 229 miles of water-races for irrigation purposes have been constructed, representing an increase of 276 per cent. on that in existence in 1914. The area of swamp land drained through the Government drainage operations was increased from 42,220 to 180,335 acres, representing an addition during the period of 138,115 acres, or 327 per cent.

BRITISH EMPIRE EXHIBITION.

The British Empire Exhibition at Wembley, which was opened in May last by His Majesty the King, affords striking proof of the Empire's capacity to become self-supporting without recourse to foreign countries. Some disappointment has been expressed with the exhibits in the New Zealand Court—apparently the Exhibition was opened before the buildings were completed, and before all the Dominion exhibits had arrived. Great improvements have since been effected in our court, and recent visitors have expressed themselves very favourably, especially with regard to the excellence of the display of refrigerated products. The New Zealand Court is now thoroughly representative of our most important industries, and honourable members can rest assured that no effort is being spared to see that New Zealand's display is worthy of the Dominion.

ESTIMATES OF REVENUE, 1924-25.

I estimate the revenue under the main headings of each of the principal Departments at—

CONCLUSION.

Many suggestions have been made with regard to borrowing a large sum of money for mortgage purposes. It is my duty to point out that this is a matter about which we require to be very careful if we are to maintain our credit in London. The credit of New Zealand stands high at present, but any appearance of recklessness or extravagance in finance would have a very bad effect, and must be avoided by every means possible. Development is going on steadily, and our producers have done wonders during the last two years. Their industry and energy have made New Zealand the most prosperous country in the British Empire, but there are still enormous possibilities in front of us—new land to be brought into cultivation, and that which is already cultivated made more productive still. Science has done much for the primary industries, but I believe it will do a great deal more in the future. I want particularly to strike a warning note about overborrowing, and in doing so I admit that we cannot go on developing without a certain amount of loan-money, but it has to be remembered that every million borrowed increases the annual charge upon the country and the burdens upon This is the case whether the money is borrowed by the General the taxpayer. Government or the local bodies; the effect is the same. Care should be taken, therefore, to see that borrowed money is, as far as possible, used only for revenue - earning purposes. This is the policy which the Government has followed since the end of the war—that of building up against the public debt a This is the policy which the Government has collection of assets which will go a long way towards providing the interest and sinking fund on the borrowed millions; and I am glad to be able to say that both the values and the earning-power of these assets are steadily increasing. That the operations of countries borrowing are very closely watched by the financial authorities in London is quite evident from what took place quite recently, when a British country asked for a fairly large loan at what seemed a reasonable rate of interest, and the underwriters were left with 85 per cent. of the proposed amount on their hands. Our credit is a most valuable asset, and it requires to be safeguarded accordingly.

The year's operations are a proof of the industry and energy of the people of New Zealand, especially of its producers. Economy and self-reliance are qualities

that should be encouraged and must be observed if the character of the people is to be maintained and the country is to prosper as we hope and believe it will. We are now in a fairly good position. With proper management we should be able to retain our prosperity and keep development going for a long time to come. What we have to avoid is an era of extravagance, of which there are already indications; but I hope the good sense of the great mass of the people will be used to prevent any possibility of the earnings of the community being squandered for unnecessary purposes.
