1939. NEW ZEALAND.

# FINANCIAL STATEMENT.

(In Committee of Supply, 1st August, 1939.)

BY THE RIGHT HON. M. J. SAVAGE, ACTING MINISTER OF FINANCE.

As the Hon. Mr. Nash has not yet returned from his important mission in London, it has fallen to my lot as Acting Minister of Finance to present this Budget to the House.

In view of the direct bearing upon the public finances, I would like to say a Economic policy. few words about the economic policy of the Government. All our efforts are directed towards raising the standard of living of the people generally and

to promoting a healthy and happy community.

The standard of living depends upon the volume of production as well as on its equitable distribution, for we cannot consume or exchange for other goods what has not been produced. To raise the standard we must have greater production, and every man, whether he is employer, manager, or worker, can and should make his contribution towards a larger output. I may say that to the extent any man fails to do his best he is retarding the fulfilment of the Government's programme of economic and social advancement.

For their part the Government is concerned to see that every man able to work gets an opportunity to earn an income that will enable him and his family to enjoy at least an adequate standard of comfort. This involves organizing the economy of the Dominion on a basis that will normally provide full employment in productive industry. That in a nutshell is the Government's

economic policy.

When the present Government took office in 1935 there were many thousands out of employment, consumer purchasing-power was at a low ebb, and there was consequently little life in trade and industry. In such circumstances our first concern was to relieve the hardships of the unemployed by providing work for them.

It has all along been recognized that the only permanent solution of the unemployed problem is for the men to find work in productive industry, but at the time there were no vacant jobs in industry. The Government therefore took immediate and vigorous action to put in hand public works of a useful character and to subsidize an expansion of works on the part of local bodies. The result was a rapid increase in consumer purchasing-power, which automatically provided the scope for an expansion of industry.

2—B. 6.

For the past year unemployment has been virtually eliminated and the people have enjoyed a state of full employment. There is no need for me to quote statistics to show the beneficial results that have followed, for they are apparent to every one.

Dominion's sterling resources.

Action along the lines indicated produced quick results, but in the absence of an equally rapid expansion in production it led to an increase in imports and a drain upon the sterling resources of the Dominion. To meet this position, which was accentuated to a considerable degree by transfers of capital abroad, exchange control and import selection were introduced last December. One way or another imports had to be reduced, and the Government were convinced that there was more scope for constructive action through selecting imports than in lifting the rate of exchange to check all imports without discrimination.

A reduction in imports means less goods for consumption and therefore a lower standard of living unless the contraction in imports is offset by a local expansion in the production of consumable goods. The necessity for restriction of imports provided an opportunity and an incentive for an expansion of local manufacture, and in selecting imports the Government have given the needs of industry preference over manufactured commodities. In fact, the Government had to choose between standing by while the standard of living fell or organizing a drive for a greater output from local industry, both primary and secondary. Another important factor previously mentioned is that we must look to industry for the only possible permanent solution of the unemployment problem. present basis upon which we have reached a state of full employment cannot be anything but a temporary phase because it is not economically sound to keep so many men engaged permanently upon works, however desirable they may be, that do not add to the present flow of consumable commodities. The standard of living depends mostly on the latter, and if public works, which by their nature can only be reflected in consumable commodities or services over a long period of years, were continued at the present level for long the present difficulties would be accentuated, and in one way or another the result would be a lowered standard of living generally.

In saying that, however, I would like it to be clearly understood that the Government have no intention of throwing thousands of men out of employment. The problem is being tackled along constructive lines of transferring the men

into industry as quickly as possible.

Expansion of industry involves plant, machinery, and raw materials, most of which must be imported, and thus adds in the short-run to the strain upon our overseas resources. A number of overseas manufacturers who are establishing factories in New Zealand have helped by supplying the necessary

plant from their own resources overseas.

Our position generally has been eased and more time for necessary economic adjustments secured as a result of Mr. Nash's successful negotiations in London, and I would like to take this opportunity on behalf of the Dominion of thanking the Imperial Government for the help they have given us. As honourable members are aware, this help takes the form of £5,000,000 sterling of export credits at  $4\frac{1}{2}$  per cent. interest with a currency of five years for Government imports from the United Kingdom and £4,000,000 sterling of short-term credits for commercial purposes. Both classes of credits are available for the purchase of British goods. Government imports at present are being swelled by material for our defence forces, and a considerable portion of the credit granted for Government purposes will be utilized for this purpose.

Mr. Nash went to London primarily to negotiate a conversion of the large loan of £17,172,000 which falls due for repayment on 1st January next. It was unfortunate that such a large loan had to be dealt with in circumstances that could hardly be less favourable for such an operation having regard to the reactions on the London market caused by the international situation, and in the success of his efforts Mr. Nash fully merits the congratulations of the country.

In the course of the discussions in London it became clear that a good deal of misunderstanding existed as to Government proposals concerning import selection. It was by no means generally appreciated that a considerable

Negotiations in London.

Secondary industries.

proportion of the present restrictions is solely for the purpose of reducing imports to the level of our ability to pay for them. These economy restrictions are temporary, and will be relaxed as the need for them passes. The essential point is that they are quite apart from the Government's proposals for developing selected industries in New Zealand. We have a large export trade which it is desirable should be extended as much as possible, and over and above external debt charges we must exchange our exports for imports. want all the imports we can afford in addition to maximum production in our own factories to raise the standard of living. This objective also renders it imperative to select for development—firstly, industries that can produce goods that we require at a competitive price, and, secondly, those from which we obtain the greatest net advantage having regard to production costs and the necessity for finding employment for many thousands of our people in productive industry. To achieve the objective industry must be efficient, and this is not possible unless it is organized in economic units and is not overcapitalized by having too many units. This is where the Industrial Efficiency Act is proving Manufacturing and distributing interests have demonstrated a willingness to use the Act better to co-ordinate their activities and relationships on a co-operative basis and thereby to attain more economic production. are also clear indications that some manufacturers are prepared to establish certain types of industries only if the provisions of the Industrial Efficiency Act can be invoked to prevent uneconomic competition, without which they consider the investment of capital in such cases would not be justified. In this respect also, therefore, the industrial policy is securing substantial advantage to the Dominion. The appreciation of the Act by industrial and trade organizations and individual operators is evidenced by the fact that at their own request nine industries have been gazetted as licensed industries during the year, making the total number twenty-four.

To remove the misunderstandings that existed, the Government policy in regard to import selection was clarified by a joint statement issued by the United Kingdom and New Zealand Governments. This statement, which was also published in New Zealand, reaffirmed our policy to ensure the maximum expansion of trade between the United Kingdom and New Zealand consistent with the maintenance of sound economic conditions in New Zealand and the Government's obligations to existing industries. It was also readily agreed that we would not use import selection to foster uneconomic industries, for, as already explained, to do so would defeat our main objective of raising the standard of living.

In administering the import selection scheme preference is, of course, given Import selection. to essential requirements for defence, for primary industries, and for secondary industries, while at the same time every endeavour is made to divert purchases to United Kingdom markets.

In regard to the remittance of moneys overseas—now subject to Reserve Overseas Bank permit—sterling funds are first of all earmarked to provide for State and remittances. local-authority debt charges, which alone involve a very substantial sum. Then allowance is made for interest on private debts and investments held by persons overseas and for certain other necessary expenditure, while the balance is available for imports, both State and private. Thus New Zealand is giving pride of place to her overseas commitments.

In applying the system every endeavour has been made to encourage the development of economically justifiable industries in New Zealand—firstly, in accordance with the policy to which I have previously referred, and, secondly, to reduce the call on sterling funds in future years by importing raw materials in place of finished goods. In carrying out this policy there has naturally been an increased demand for machinery for manufacturing purposes and for raw materials. We will receive the benefit of these importations in future years, but the immediate effect has been to increase the demand for sterling funds, and this in turn has led to some delay recently in arranging remittances.

This pressure upon sterling funds, combined with the fact that import licenses for each half-year have mostly been issued early in the period to which they apply, with consequent immediate heavy demands upon the banks, has given rise to a feeling of uncertainty as to when sterling will be made available to importers individually. Importers have recently been invited to submit through their bankers particulars of the remittances required for their import business to 31st December next. On receipt of such particulars license-holders will be advised of the particular month or months during which their remittances may be made. Thus the uncertainty will be removed and importers will know exactly where they stand and be able to place their orders abroad with confidence.

Iron and steel industry.

While dealing with the development of industries special mention should be made of the iron and steel industry, for this is a basic industry for many other industries. After passing the authorizing Act in 1937 progress in establishing the works was held up pending investigations to prove the quantity of ore that is available at Onekaka. The Government naturally wanted to be sure that raw materials in sufficient quantity were available before launching a The exploratory work has now demonstrated that there large-scale project. is sufficient usable iron-ore and ironsand in the country to supply the industry for half a century, and it is expected that further investigations will disclose Sufficient coal of suitable quality is also available, and a additional deposits. further expert report by H. A. Brassert and Co., Ltd., of London, who are specialists in steelworks, indicates that the proposed works will be able to produce steel at a price comparable with that being paid to-day. In other words, the industry will be an economic one in every sense, as practically all the raw materials will be available in New Zealand. The services of H. A. Brassert and Co., Ltd., have been retained to design and supervise the construction of the plant, involving a capital outlay of about £5,000,000 spread over a period of about three and a half years.

The influence of such an expansion of productive employment will be farreaching. During the constructional stage of the steel plant a considerable amount of employment will be created, and many hundreds of men representative of various trades will participate in the work of site preparation, foundations, assembly of plant, and erection of buildings, &c. When the plant comes into full operation approximately one thousand five hundred men will be directly and permanently employed. In addition the indirect employment will be considerable. In the coal-mines, for instance, the additional demand for coal, amounting to nearly 200,000 tons per annum, not subject to seasonal variations, will create favourable conditions for continuous production with stable employment for the miners. It means that approximately two thousand workers will be directly engaged in production either in the steel plant or in supplying the necessary raw materials of domestic origin.

#### HOUSING.

Housing programme.

The Government have consistently maintained in the forefront of their programme the provision of adequate housing facilities for the people. The problem is one which requires to be approached with breadth of view and imagination. It is one of great magnitude and involves intelligent planning for the provision of the best possible environment for the people, who spend so great a proportion of their lives in their homes.

National housing survey.

In order to appreciate the full significance of the problem one of the first steps taken by the Government was to order a national housing survey. Under the provisions of the Housing Survey Act, 1935, an obligation was placed upon 119 local authorities to conduct housing surveys. To date 115 authorities have complied with the Act, and the survey discloses that no less than 6,827 houses in the principal centres of population should immediately be demolished, while 9,835 dwellings are overcrowded. In addition, there are 31,663 houses which are unsatisfactory but are capable of being repaired. It is not practicable, however, to consider an early programme of demolition until the acuteness of the present

shortage of houses has been reduced to a reasonable extent. Further, it is not possible to proceed with a successful slum-clearance campaign until special empowering legislation on similar lines to that in operation in Great Britain is available. During the Government's present term of office it is hoped to submit a Housing and Slum Clearance Bill for the consideration of Parliament. I may add that the Government have also under consideration special provisions for dealing with the difficult problem of houses in rural districts.

The Government's house-building operations through the Department of Housing Construction have been expanded to the limit set by the availability

of skilled labour.

In the 1936 Budget, when the Government's housing policy was announced, it was stated that it provided for the construction of 5,000 houses. It is expected that the five thousandth home will be delivered for occupation in less than three months' time, and by that date another 2,500 houses will be partially completed.

On numerous occasions since the commencement of the Government's housebuilding programme it has been stated by critics of the Government that private enterprise in house building would practically disappear and that therefore the Government's efforts would result in no more houses being available than in the past. How far from the truth these contentions were is disclosed by the statistics, which show that permits taken out for private dwellings numbered 4,140 for 1935-36 compared with 4,648 for 1938-39.

The operations of the Department have been superimposed upon the Results achieved. normal work carried out by private enterprise, assisted, of course, in the usual manner by State Advances loans. During last year the Housing Construction Department commenced building 3,445 houses, while the total number of dwellings arranged for was 8,093, a figure that has broken previous records by a substantial margin. The previous highest figure for permits for dwellings

was 7,179 for the year 1926–27.

The fact that such progress has been made concurrently with the most vigorous programme of other Government buildings on record, and in spite of the grave depletion in our sources of skilled labour as a result of the virtual collapse of the apprenticeship system during the depression years, is a remarkable achievement and reflects great credit on both the building industry and the workers engaged in that industry. Further, not only has the Government's policy resulted in the production of a record number of homes, but more people were enabled to own their own homes in 1938-39 than in any year for almost a decade. This fact disproves conclusively the statements which have been persistently circulated that the present Government's objective was to create a universal state tenantry.

It was realized at the commencement that the progress of the Housing Shortage of Scheme would depend very largely on the availability of skilled labour. It skilled labour. was reported in the last Budget that the operations of the Department were being seriously delayed on account of this factor. It was also mentioned that the average number of artisans employed by the contractors on each house that was under actual construction was only 18. After the date of the last Budget the position grew progressively worse, until by November, 1938, there were only 15 artisans employed per house under construction. When the number of houses in progress was taken into consideration it was realized that the Department was relatively worse off in November than in July to the extent of the services of about six hundred artisans. The housing survey, together with the position disclosed by the inspections of the premises occupied by applicants for State rental houses, showed such an urgent need for improved accommodation for so many people that the Government decided to adopt the most prompt means of augmenting the supply of skilled labour—namely, by bringing artisans from overseas. Early in the present year Mr. J. Hodgens, M.P., was deputed to visit Australia for the purpose of selecting suitable men, and to date 384 tradesmen have been brought to the Dominion from this source. In addition, arrangements have been made to bring over a period of six months about five hundred artisans from Great Britain, and the first groups have already arrived.

Housing expenditure.

Up to the 31st July, 1939, the total expenditure on housing, purchase of land, provision of services, administration, &c., amounted to £7,106,000; while the total commitments for land purchases and contracts entered into from the inception of the scheme to the present date amounts to approximately £10.000.000.

For the financial year 1938-39, the first year during which the Department can be said to have worked to capacity, the cost of administration was only 2.67 per cent., a low figure for a construction organization.

#### DEFENCE.

**National** defence.

The alarming manner in which the international situation has deteriorated during the past year has rendered it necessary for the British Commonwealth and other peace-loving nations to accelerate their preparations for defence.

It is of tragic significance that the millions of pounds which the nations of the world are daily expending on uneconomic weapons of defence or aggression, as the case may be, would go a long way towards raising the standard of living and improving the economic security of the peoples concerned. However, so long as peace and our national security continue to be threatened, the Government will not fail in their duty to build up defence Forces adequate to protect our shores and to play a worthy part in the wider field of the general defence of the British Commonwealth of Nations.

Defence Conference.

With a view to ensuring that adequate arrangements and proper co-ordination existed for the defence of British interests in the Pacific—an area in which New Zealand is naturally more vitally interested—it was decided to invite the Governments concerned—namely, the United Kingdom and Australian Governments—to take part in a Defence Conference to be held in New Zealand. The invitation The invitation was very readily accepted, and a most successful conference was held in Wellington during May last. A useful exchange of ideas took place, and plans were prepared by the representatives concerned to ensure maximum co-ordination in the unfortunate event of hostilities breaking out. At the close of the Conference the Imperial Government very kindly agreed to allow Major-General Mackesey, one of their delegates, to remain in New Zealand in order that he might prepare a report on Thus the Government have before them a clear-cut New Zealand's land Forces. policy, and are pressing forward steadily towards its completion.

Adequate defence requires co-ordination of effort among the three fighting services—the Navy, the Army, and the Air Force—and behind them an organization to minimize possible interruptions with trade and industry by building up reserve stocks of materials and generally providing for essential supplies for both the armed Forces and the civilian population. In every required direction preparations to meet possible trouble are being pushed forward vigorously.

In the case of the Naval Forces, action lies chiefly along the lines of completing the Naval Dockyard, building and stocking a naval armament depot and storehouses, building and equipping workshops, and the provision of adequate training facilities. In regard to the last-named, three small seagoing training-vessels are being built.

On land the fortifications of the defended ports are being modernized and The establishment of the Territorial Army has been raised to 16,000, and recruiting for this Force, and also for the National Reserve, is proceeding Training facilities in all directions are being increased correspondingly, satisfactorily. and every effort is being made to build up stocks of equipment, armament, ammunition, and stores necessary for training and for mobilization. In general, new life has been put into the Army, which is being moulded as rapidly as possible into a force of which the people may be proud.

The Air Force as a fighting unit hardly existed when the Government took office in 1935. The programme announced in 1937 has recently been expanded, and great strides have been made in building up an efficient force. Efforts so far have been concentrated largely on training personnel, constructing fully-equipped military aerodromes, and generally building up an efficient ground organization.

Navy.

Army.

Air Force.

Modern long-range bombers for two squadrons will be delivered shortly, while 250 aircraft for training and other purposes have been ordered, and a number of these have already been delivered in New Zealand. Stocks of bombs and other munitions have been obtained.

As a result of the visit of the United Kingdom Air Mission, arrangements have been made for the establishment of an aircraft factory at Wellington, and an order is to be placed with the de Havilland Aircraft Co., Ltd., for the manufacture of one hundred Tiger Moth fighting planes at a cost of £155,000. The expansion of the flying training organization in New Zealand is being undertaken in consultation with the Imperial Government, who have agreed to accept and pay for 220 New Zealand-trained pilots per annum.

During last year approval has been given to the establishment of a Flying Training School at Blenheim capable of an output of 140 pilots a year, and to an increase in size of the Flying Training School, Wigram, to ensure a similar output. Good progress has been made with the development of the station at Ohakea, with the provision of additional accommodation at Wigram and Hobsonville, and with the establishment of the new station at Blenheim. The construction of the operational station at Whenuapai is proceeding satisfactorily, and it is anticipated that the expansion programme will be complete by December, 1940.

The Railway Workshops Scheme for the training of apprentice personnel is

developing in accordance with the initial programme. The Instructional School at the Hutt Workshops commenced training thirty mechanics in July, 1939, and it is anticipated that instruction will commence in the other Railway Workshops

in November.

Territorial squadrons have been formed at Auckland, Wellington, and Christchurch, and it is expected that the squadron at Dunedin will be formed in

January, 1940.

Capital expenditure involved in the expanded programmes for the three Defence Services will exceed £5,000,000, spread over the next two years. Maintenance expenditure. costs will be in the vicinity of £3,000,000 per annum. For all purposes the expenditure during this financial year will be about £5,400,000.

#### PUBLIC ACCOUNTS.

The public accounts for the year ended 31st March, 1939, closed with a surplus Surplus 1938-39. of £809,000, for which buoyant revenue was mainly responsible. It is satisfactory to note that, although there were no increases in rates of taxation, the revenue received from taxation exceeded the previous year's receipts by £642,000.

The following is the position:

|                               |         | $R_{\rm E}$                 | EVENU | JE.    |       | £          | £          |

|                               | -       |                             |       | •      | •     | ••         | £809,000   |

Transfer of surplus.

It is proposed to transfer this surplus of £809,000 to the Social Security Fund, and the necessary legislation to give effect to this will be introduced later during the session. This transfer will reduce the amount of subsidy otherwise payable to the Fund for the current financial year.

Included in the expenditure ("Annual Appropriations: Other Services") is a transfer of £272,000 to the Dairy Industry Account to cancel the indebtedness in the account resulting from the deficit in the guaranteed price for dairy-produce

during the 1936-37 season.

Full details of both revenue and expenditure have already been published and are shown in the Budget tables so I do not now propose to review the results in detail.

It is worthy of note, however, that practically every item of taxation other than Customs—and for this item the receipts for 1937–38 were abnormal—showed substantial increases over the previous year. This fact is a clear indication of the greater prosperity of the people generally.

#### PUBLIC DEBT.

Public indebtedness.

During the past financial year the provision of funds for expenditure on public works and other capital purposes resulted in a net increase in the public debt of £13.768.930.

New issues, which were all made in New Zealand, were made for the following purposes:—

| •             |            |         |         |         |       | £            |
|---------------|------------|---------|---------|---------|-------|--------------|
| Public works  | 3          |         |         |         |       | 9,622,279    |
| Electric supp | oly        |         |         |         | • •   | 180,000      |
| Main highwa   | ys         |         |         |         |       | 2,675,600    |
| State coal-m  |            |         |         |         |       | 95,000       |
| State forests |            | • •     |         |         |       | 175,000      |
| Housing       |            |         |         |         |       | 4,000,000    |
| Raised for re | edemption, | but not | used at | 31st Ma | arch, |              |
| 1939          | • •        | • •     |         |         |       | 1,107        |
|               |            |         |         |         |       | C1.0 MAO 000 |
|               |            |         |         |         |       | £16,748,986  |

Against the increase of £16,748,986 are offset redemptions totalling £2,980,056, which were made from the undermentioned accounts:—

| Public Debt Repayment          |          |     |     | 1,756,618  |
|--------------------------------|----------|-----|-----|------------|
| Sinking Funds                  |          | • • |     | 228,030    |
| Reparation and War Credits     | • •      | • • | • • | 5,025      |
| Repayments of capital by other | accounts | • • | • • | 990,383    |
|                                |          |     |     | £2,980,056 |
|                                |          |     |     |            |

Domicile of debt.

The net increase of £13,768,930 has raised the total public indebtedness to £303,970,272, which at 31st March, 1939, was domiciled as follows:—

|   |      |      | £            |
|---|------|------|--------------|
|   | <br> | <br> | 156,853,016  |
|   | <br> | <br> | 879,600      |
| d | <br> | <br> | 146,237,656  |
|   |      |      | £303,970,272 |
|   |      |      |              |
|   | <br> | <br> | d            |

Treasury bills.

During the year revenue Treasury bills totalling £3,575,000 were issued, but all these were redeemed out of revenue, and consequently no revenue bills were outstanding at the close of the year.

Reserve Bank credit.

The money for housing and most of the borrowing for public works and other purposes were obtained from the Reserve Bank. This method of finance has the effect of increasing internal purchasing-power, and its usefulness is conditioned by the volume of production. In present circumstances, when sterling funds are short and imports have to be restricted, this type of

finance, while justifiable and beneficial under certain circumstances, has obvious limitations during the current year. In fact, it must be clear to anybody who studies the position that we are not suffering from a shortage of money in New Zealand, but from a shortage of what money will buy.

9

Accordingly, in May last a Government loan of £4,500,000 was offered to the Local loan. public in New Zealand. The nominal rate of interest was 4 per cent., and the issue price 96 for stock maturing in 1958, but in respect of which there is an offer to redeem at par at any time after 31st May, 1954. Alternatively, investors were offered stock to mature in 1948 at an issue price of 99.

The loan, I am pleased to say, was substantially oversubscribed. proceeds are being applied, in terms of the prospectus, to public works and general developmental purposes, including capital expenditure on defence works.

The terms of issue for that loan were fixed on a basis designed to enable as large a section of the community as possible to invest. It was recognized, however, that many people of limited means, though willing to help, would not have a lump sum available for investment during the short period the loan was open for subscription.

As a corollary to the main loan, therefore, the Government proposes to inaugurate a scheme specially designed to enable the wage and salary earners and persons of small means to invest portions of their incomes.

Full particulars of this scheme will be made available at an early date, but, National Savings briefly, the proposal is to open up an avenue of investment in Government funds for sums of money, however small. The investment can be built up by small payments over a period bearing interest at a rate comparable with that of the recent loan. The term will be for a fixed period of four or five years. Each individual's contributions will be accumulated in a separate National Investment Account in his name and, if desired, will be convertible into National Savings As the most convenient means of bringing this scheme within reach of the public the organization of the Post Office Savings-bank will probably be utilized to handle the details. Legislation will be brought down at an early date to give effect to these proposals.

I have already referred briefly to the important negotiations in London London in connection with the conversion of the Dominion's £17,172,000 sterling loan loan. which falls due for repayment in January next. Applications are now being invited in London for a £16,000,000 sterling cash and conversion loan bearing interest at  $3\frac{1}{2}$  per cent. per annum and issued at £99 per cent. The balance of the total of £17,172,000 outstanding is held by New Zealand institutions, and other arrangements will be made for its conversion on due date.

Further details regarding the loan are as follows:-

(1) Holders of the £3 10s.-per-cent. stock, due to be repaid on 1st January, 1940, have the right to receive, in exchange for each £100 stock surrendered, £100 £3 10s.-per-cent. conversion-stock 1939-45 together with a cash payment of one pound.

(2) Cash applications will be accepted to an amount sufficient to make up, with the stock issued in conversion, a total of £16,000,000.

- (3) The proceeds of the cash receipts will be applied towards redemption at par on 1st January, 1940, of the £3 10s.-per-cent. stock 1940, which has not been converted.
- (4) The new stock will be redeemed by purchase at or under par, exclusive of accrued interest, or by half-yearly drawings at par in sums of £100, commencing 1st July, 1940.
- (5) The New Zealand Government have undertaken to provide for redemption of this stock by making available in London, out of funds accruing from exports from the Dominion or otherwise, sufficient sterling to repay the whole of this issue by 1st January, 1945, by half-yearly instalments of £1,000,000 during 1940, and £1,750,000 thereafter, payable on or before 30th June and 31st December in each year.

(6) During periods 5th June to 20th June, and 5th December to 20th December in each year, commencing in 1940, holders of stock will have the option of converting such stock, in sums of £100, into one-half each of £3 10s.-per-cent. stock 1949-54 and 1955-60, at rates to be published from time to time.

To the extent that these options are exercised in any halfyear the obligation to redeem in that half-year will be reduced.

(7) The New Zealand Government reserve the right on or at any time after 1st July, 1941, on giving not less than three months' notice, to redeem at par the whole or any portion of the stock, not being less than a nominal amount of £1,000,000 sterling, at any one time.

The list, for both cash and conversion applications, opened on the 26th July, and will close on the 5th August.

#### PUBLIC WORKS.

Public-works programme.

For the reasons I have already given, and to carry towards completion the large works already in hand, the public-works programme for the current year, apart from defence works, is approximately of the same magnitude as last year. It may be said that we have reached the peak so far as public works is concerned, and our job now is to concentrate on tapering the magnitude of the programme down to a more economic level by transfer of men to the primary and secondary industries.

Land settlement.

As a matter of fact, this year's programme includes £3,639,000 for settlement of new expenditure onland-development, including improvement ofexisting areas, extensive assistance to the establishing them in agricultural and pastoral pursuits, the expansion of At 31st March last afforestation, and the drainage of swamp lands. the aggregate area comprised in the numerous land-settlement projects was 1,071,000 acres, of which a large proportion is under actual cultivation More than 2,400 settlers have been established within recent or pasture. the development of 4.800 workmen are also employed on general areas not yet subdivided into holdings. As some indication of the results now attained, the statistics for 1938-39 show that 101,000 dairy cows and other cattle together with 274,000 sheep were carried, while 5,260,000 lb. of butterfat and 5,540 bales of wool were produced. The cash returns from this and other produce totalled £474,000, a record amount, and this is apart from the increased production from privately-owned lands in the irrigation areas of With regard to the afforestation activities of the Otago and Canterbury. Government, a total of 8,355,000 acres is now comprised in the various forest areas, some 1,450 men are employed, and last year's cash receipts from the disposal of forest produce were £153,000, being £9,000 more than in the previous year.

Railway construction.

In regard to works in hand this year, a prominent place is occupied by construction of new railway-lines, and by improvements and additions to existing lines. Construction has been completed on the East Coast trunk line to Wairoa, and this has been opened for traffic. Further expenditure will be made on the South Island Main Trunk and other lines which were in hand last year.

The railway improvements and additions for the current year are anticipated to require £4,000,000, of which £700,000 will be provided from depreciation and renewal reserves. This expenditure will be devoted to a continuance of the enlarged scheme of rolling-stock upon which a commencement was made last year, and to further station, siding, and signalling improvements, as well as to deviations and grade easements. In this and other sections of public works careful consideration has been and is being given to the question of the call upon overseas exchange and to the relative merits of the demands of these works and of private industry.

For main highways and road operations, including maintenance of Highways and highways, a total of £7,000,000 is being provided, this being £250,000 more roads. than was expended last year. The great volume of work now being undertaken with the aid of modern machinery upon the Dominion's road transport routes, in both densely and sparsely populated areas, has been favourably commented upon by the travelling public.

Apart from State housing activities, which I have already dealt with, the Public various general public buildings-new offices, post and telegraph buildings, schools, &c.—are expected to require £2,150,000. Of this total £900,000 has been allocated for the various school buildings which are required. mentioned last year, co-ordination of building activities is being maintained so that the most urgent needs are met first and the best use made of available labour and material.

The increased industrial activity in the Dominion is clearly reflected in Hydrethe increasing demand for electricity. The Government's generating-works have been fully loaded, and substantial additions to the installations at Arapuni and Waikaremoana in the North Island and Waitaki in the South Island are in hand. The revenue receipts totalling £1,622,457 for the past year were more than £200,000 higher than for 1937–38, which was itself a peak year. The commercial accounts to be presented with the Public Works Statement will disclose a substantial profit for last year, and this will be applied to reducing, very materially, the sinking-fund arrears brought forward from earlier years. An ample supply of cheap power is essential to the expansion of industry on a large scale, so expenditure on this type of work is clearly sound business.

It is anticipated that constructional expenditure for the current year on the additions mentioned previously and on a new generating-station at Highbank, Canterbury, and numerous minor extensions throughout the Dominion will require £1,400,000, and operating expenses £440,000.

To provide over a short period for the heavy capital expenditure on defence, Defence. a new vote has been included in the Public Works Fund estimates for an amount of £2,200,000.

These details cover the principal classes of public works. The financial Financial aspect of the whole programme for this year is shown more clearly by the programme. following summary:

| D. 9  | £                |
|---|------------------|
| Railway construction and improvements         | 5,230,000        |
| Highways and roads                            | 7,000,000        |
| Public buildings                              | 2,150,000        |
| Land settlement, development, and improvement | 3,639,000        |
| Hydro-electric development                    | 1,840,000        |
| Telegraph and telephone extensions            | 600,000          |
| Defence                                       | 2,200,000        |
| Other works (aerodrome extensions, lighthouse | <b>-,200,000</b> |
| works, development of tourist resorts, plant. |                  |
| material, &c.)                                | 1,258,000        |
| /D - / - 1                                    |                  |
| Total   | £23,917,000      |
|   |                  |

Attention has on previous occasions been drawn to the fact that constructional and maintenance operations are so frequently interwoven that a considerable proportion properly chargeable to revenue is necessarily included in the statement of expenditure on public works. To defray this proportion, however, it is anticipated that revenue-moneys to a total of £4,855,000 will be forthcoming from taxation, disposal of produce from the land, and from electricity sales and miscellaneous sources. The balance of £19,062,000 will

require to be provided from loan-money. The local loan, already raised, together with the amount to be raised under the National Saving Scheme, will provide a portion of the amount required. The £5,000,000 sterling credits for Government imports, arranged by the Hon. Mr. Nash in London, will account for a substantial portion of the balance, because the works involve the importation of a large amount of material from the United Kingdom.

#### 1939-40 PROPOSALS.

All the various matters I have dealt with form the background of the

Budget for the year and affect it in one way or another.

Dealing first with the expenditure, honourable members will find that the estimates provide for a continuation of existing services. Debt charges show an increase of £741,000, of which provision for interest for a full year on new borrowing for last year and anticipated borrowing to finance this year's capital expenditure programme accounts for £535,000. The balance, for the most part, arises from the automatic increase in the item for Repayment of Public Debt.

The coming into operation of the Social Security Act is reflected in some relatively large changes in the estimates. The items for pensions, apart from war pensions, have disappeared from the Consolidated Fund estimates, and have been replaced by a new vote providing for the transfer of £2,000,000 to

the Social Security Fund.

The votes for education and health show an increase of £547,000, but, even so, for the reason stated, the aggregate for all the votes grouped under the heading of "Social Services" is approximately £2,300,000 less than for last year. Against this the disappearance of the Employment Promotion Fund has rendered it necessary to make some provision under the Consolidated Fund for promotion of employment, as these subsidies cannot be discontinued all at once. Accordingly, for that purpose, £2,500,000 has been provided under vote "Labour," and £400,000 under vote "Native." These adjustments involve a net increase of approximately £600,000 in the expenditure from the Consolidated Fund.

As I have already indicated, there is a heavy increase in the cost of defence, towards which the votes for the three Services on the Consolidated

Fund have been increased by £1,114,000.

The various increases I have referred to have been offset to the extent of £185,000 by a net decrease of this amount in other votes, leaving a net aggregate increase in the estimated Consolidated Fund expenditure of £2,270,000.

On the revenue side of the account we are faced with a total net shrinkage estimated at £822,000. The importation of raw materials in preference to finished goods under the import selection policy will, it is anticipated, reduce Customs duties by £1,650,000 in comparison with last year's receipts. The yield from income-tax at the existing rates is estimated to return £705,000 less than for 1938–39, while the revenue from stamp and death duties is anticipated to be lower by £130,000. Against these reductions are offset an increase in railway interest of £500,000, while other items have been increased by £1,163,000, of which £990,000 represents the profit derived from the issue of our own silver coins. These, with other minor increases and decreases, are estimated to reduce the total revenue by the £822,000 referred to.

At this stage, allowing £200,000 for supplementary estimates and contingencies, the budgetary position is:—

Debt charges.

Social security.

Estimated revenue and expenditure 1939-40.

I might explain that in arriving at these results the expenditure estimates have been carefully overhauled, while, on the other hand, every endeavour has been made to arrive at as accurate an estimate of the revenue as possible. The position therefore is that we are faced with the problem of increasing the revenue from taxation by £2,500,000. The problem is not an easy one, and the Government have given very careful consideration to various alternatives in order that the additional burden might be so placed as to bear as lightly as possible upon the people.

To meet the position it is proposed to obtain a further £1,000,000 from Revenue. income-tax, £200,000 from additional death duties, £300,000 by increasing beer duty from 1s. 3d. to 1s. 9d. a gallon, and £1,000,000 through raising the petrol-tax Petrol-tax. by fourpence a gallon.

For individuals the present rate of income-tax is 1s. 8d. in the pound, Income-tax increased by 1/100th of a penny for every pound of taxable income up to £5,500, and thereafter by 1/150th of a penny up to a maximum of 8s. 2d. in the pound for earned income. On unearned income these rates are increased by one-third. To obtain the additional revenue it is proposed to increase the basic rate by fourpence, making it 2s. in the pound, and to continue the graduation beyond £5,500 at 1/100th of a penny, instead of 1/150th of a penny as at present, up to a maximum of 8s. 7d. in the pound reached at £7,900. At the same time the amount of the general exemption will be reduced from £210 to £200. This will have the effect of bringing within the scope of the tax a few more single men without dependants, and of increasing the taxable balance of all other taxpayers by £10.

I realize that taxpayers are interested not so much in the technical changes made as in the net effect on their personal assessments. To illustrate the alterations I will quote the following examples based on a typical case of the earned income of a man with a wife and two dependent children:-

| To       | tal Incor | ne. | At Pres | ent.        |       | f Tax under coposals. | Increase in Tax. |
|----------|-----------|-----|---------|-------------|-------|-----------------------|------------------|
| £<br>300 |           |     | £ s     | . d.<br>Vil | £     | s. d.<br>Nil          | £ s. d.<br>Nil   |
| 365      | • •       |     |         | 8 4         | 1     | 10. 2                 | 1 1 10           |
| 400      |           |     | 3       | 8 0         | 5     | 2 1                   | 1 14 1           |
| 600      |           |     | 22      | 8 0         | 27    | 12 1                  | 5  4  1          |
| ,000     |           |     | 70      | 8 0         | 82    | 12 1                  | 12  4  1         |
| ,000     |           |     | 1,283 1 | 4  7        | 1,365 | 18 9                  | 82  4  2         |
| ,000     |           |     | 2,841 1 | 3  0        | 3,203 | 1                     | 361 15 9         |

The additional tax payable by a man with an income of £365 is only about one pound a year, while the increase on an £8,000 income is equal to approximately one pound a day.

In regard to companies, the basic rate is to be raised from 1s. to 2s. in the pound to bring it to the same level as proposed for individuals. The rate of graduation, however, is to be reduced, from the present rate of 1/100th of a penny in the pound up to £5,500 and 1/150th of a penny thereafter up to a maximum of 7s. 6d. in the pound, to a rate of 1/125th of a penny in the pound up to a maximum of 7s. 11d. reached at £8,875.

I may add that, later this session, an amendment to the Land and Income Tax Act will be introduced to correct a number of anomalies. This Bill will include a repeal of the provision exempting from income-tax the income of farmers from land in cases where the holdings do not exceed an unimproved These amendments, however, will apply not to tax payable value of £3,000. in February next, but to the tax payable in the following year.

The effect will be to place farmers upon the same basis as other sections of the community. It will generally be agreed that if a farmer makes a profit from his operations sufficient, after deduction of all the usual allowances, to bring his income within the scope of the taxation provisions he should pay tax on the same basis as any other taxpayer.

Estate, succession and gift duties.

To obtain the £200,000 from death duties, it is proposed to increase the scales for estate, succession and gift duties by approximately 20 per cent., discontinue the present exemption of £1,000 for life-insurance moneys, and slightly reduce the present exemption for estates passing to widows.

The life-insurance exemption was introduced in 1925, but experience has shown that there is no real justification for it, and it is not granted in Great Britain or in any of the Australian States. Concerning the exemption to widows, the present allowances are £5,000 in respect of estate duty and £10,000 for succession duty. The exemptions now proposed are £3,000 plus one-third of the difference between this and the amount of her succession up to £4,500, making a limit of £3,500. In the case of succession duty the proposed exemption is £5,000 plus a third of the difference between this amount and the amount of her succession up to £10,000, making a limit of £6,666 13s. 4d. Even with all these adjustments, death duties in New Zealand on estates below £5,000 are appreciably lower than those charged in Great Britain or in the Australian States. I may add that the statistics show that the great majority of estates in New Zealand are for amounts below £3,000, and if such an esate is left to a widow no duties are payable.

Beer duty.

In regard to the proposed increase in beer duty I may mention that the rate was 1s. 6d. a gallon in 1934, but was then reduced to 1s. 3d.

Defence contribution.

Most of the additional revenue required is to be obtained from income-tax on the one hand and petrol-tax on the other. The former is regarded by the Government as the appropriate field for providing for normal expansion of State activities, while the latter is considered in the light of a special contribution towards the additional heavy costs of defence. Petrol-tax has been chosen because, directly and indirectly, it reaches every section of the community, and all should share in the cost of defence. The tax has the merit of pressing much more lightly upon large families than other forms of indirect taxation and a good deal of it is in the nature of a luxury-tax. I may add that the rates of the mileage-tax imposed by section 4 of the Motor-vehicles Amendment Act, 1934-35, upon motor-vehicles using motive power other than petrol, such as Diesel oil, will be increased correspondingly.

**Fstimated** 

Allowing for the effect of the additional taxation, the estimated budgetary revenue 1939-40. position for the year is as follows:

|                     | $\mathbf{R}$ | EVENUE |         |     |            |                     |
|---------------------|--------------|--------|---------|-----|------------|---------------------|
| Taxation—           |              |        |         |     | £          |                     |
| Customs             |              |        |         |     | 10,000,000 |                     |
| Beer duty           |              |        |         | ٠   | 1,300,000  |                     |

In conclusion I would say that we have already made much progess in improving the general standard of living. Given the continued co-operation and whole-hearted support of the people we can so increase production as will enable us to consolidate our position on a sound economic basis. With this as a starting-point we will move forward to even higher standards in the future.

\*Includes £200,000 paid off the Naval Defence Loan in terms of the clause by which New Zealand has the right, on giving three months' notice, to repay at par any part of the principal.

†Following on the "Hoover" moratorium, the Imperial Government agreed to postpone the instalments of principal and interest due in December, 1931, and June, 1932, only one half-yearly payment was therefore made in 1931-32. Further postponements from 1st July, 1932, were agreed to by the Imperial Government. No payments were therefore made from 1932-33 to 1938-39.

Authorized to be raised in accordance with the provisions of the New Zealand Loans Act, 1932, whereby the interest and principal are a direct charge upon the public revenues of the Dominion.

Trustees may invest in either of the above-mentioned Loans under the powers of the Trustees Act, 1908, unless expressly forbidden in the instrument (if any) creating the Trust.

The Reserve Bank of New Zealand gives notice that, on behalf of the Minister of Finance, it is authorized to receive applications for New Zealand Government Loans as above.

If not previously redeemed, the £4 per cent. Loan, 1954/1958, will be paid off at par at the Reserve Bank of New Zealand on the 31st May, 1958; but the Minister of Finance reserves the right to repay at par at any time on or after the 31st May, 1954, on giving three months' notice, in the New Zealand Gazette, of his intention to repay.

If the market selling price of the £4 per cent. Loan, 1954/1958, falls below the price of issue, namely £96 per cent., sums will be made available annually, as required, up to a total of 5 per cent. of the amount of the Loan outstanding at the end of the previous financial year, for the purchase for cancellation of such stock on offer below that price.

If not previously redeemed, the £4 per cent. Loan, 1948, will be paid off at par at the Reserve Bank of New Zealand on the 30th November, 1948.

Stock of the £4 per cent. Loan, 1948, which has been in the beneficial ownership of a holder for a period of at least six months prior to death, will be accepted at par at any time before maturity in payment of death duties in respect of that person's estate.

The proceeds of the issue are to be utilized for Public Works and general developmental purposes,

including capital expenditure on defence works.

The ultimate repayment of the Public Debt of the Dominion is, in the main, provided for under the Repayment of the Public Debt Act, 1925, in pursuance of which New Zealand's Debt reduction resources shall be applied in the purchase and redemption of New Zealand Government securities at or before maturity. For this purpose there is issued annually out of the Consolidated Fund a sum equal to  $\frac{1}{2}$  per cent. of the Debt affected, and to this is added a sum equal to interest at  $3\frac{1}{2}$  per cent. per annum of the Debt paid off under this scheme. The Repayment of the Public Debt Act applies to the major portion of the Dominion's Debt, certain loans for which adequate sinking fund provisions are specifically provided, and also the portion of New Zealand's War Debt funded with the Imperial Government, having been excluded from the Debt Repayment Scheme.

Securities.—On surrender of fully-paid Allotment Letters on or after the 4th August, 1939, New Zealand Government Stock will be issued in either of the following forms as applicants may direct:-

(1) Registered Stock transferable by Memorandum of Transfer.

(2) Stock Certificate(s) to bearer with coupons annexed.

Registered Stock will be convertible into Stock Certificates to bearer, and Stock Certificates will

be convertible into Registered Stock, without payment of any fee.

Transfers.—The Register of Stock will be kept at the Reserve Bank of New Zealand, Wellington, where transfers will be registered without payment of any fee. Stock will be transferable in amounts of £5 or multiples thereof.

xixВ.—6.

Stock Certificates (until the name of some person is inserted therein as the holder) are transferable

Certificates of Title. - Certificates of Title evidencing ownership of the stock to which they relate will be issued, without payment of any fee, to holders of Registered Stock in either the £4 per cent. Loan, 1954/1958, or the £4 per cent. Loan, 1948.

Interest.—Interest will be payable half-yearly on the 31st May and the 30th November.

A full half-year's interest will be paid on the 30th November, 1939, on fully-paid allotments of both Loans.

A first payment of £1 10s. 6d. per cent. on instalment allotments will be made on the 30th November,

Interest on Registered Stock will be paid free of inland exchange by means of interest warrants, which will be transmitted by post at the risk of the stockholder. The Reserve Bank of New Zealand will accept directions from stockholders for payment of interest to any agent in the Dominion; existing instructions for the payment of interest in the Dominion on New Zealand Government Stock will obtain in respect of these Loans.

Interest on Stock Certificates to bearer will be paid free of inland exchange by means of coupons annexed to the Certificates. Interest coupons may be presented at the Reserve Bank of New Zealand, Wellington; at any branch of the Bank of New Zealand in the Dominion; or at any Postal Money-

order Office in New Zealand.

Stamp Duty.—Stock of this issue will be exempt from Stamp Duty on the transfer thereof otherwise than by way of gift.

Minors.—Any person of the age of ten years or upwards may be registered as the holder of Stock and may execute transfers thereof.

Exchange on Remittances.—Cheques in payment of allotments will be accepted free of inland

exchange.

Applications.—Applications, on the prescribed form, will be received at the Reserve Bank of New Zealand, Wellington; at any branch of the Bank of New Zealand in the Dominion, or at any Postal Money-order Office in New Zealand.

Applications must be for sums of £10 or for a multiple thereof.

Applications for Fully-paid Allotments of the £4 per cent. Loan, 1954/1958, must be accompanied by a remittance of £96 per cent. of the nominal amount applied for, and applications for Fully-paid Allotments of the £4 per cent. Loan, 1948, by a remittance of £99 per cent. of the nominal amount applied for.

In the event of partial allotment, the balance of the amount paid on application will be refunded

to the applicant on allotment.

Applications for Instalment Allotments must be accompanied by a deposit of £10 per cent. of

the nominal amount applied for.

If partial allotment is made, the balance of the deposit paid on application will be applied towards the payment of the instalment due on the 30th June, 1939; any surplus remaining after making that payment will be refunded to the applicant on allotment.

In case of default in the payment of any instalment at its proper date, the deposit and any

sum previously paid will be liable to forfeiture and the relative allotment to cancellation.

Commission at the rate of 5s. per £100 stock will be allowed to bankers and registered sharebrokers on allotments made in respect of applications bearing their stamp.

Copies of this Prospectus and forms of application may be obtained at the Reserve Bank of New Zealand, Wellington; at any branch of any Bank in the Dominion; at any Postal Money-order Office in New Zealand; or from members of any Stock Exchange in the Dominion.

The list of Applications will be opened forthwith and will be closed on or before Wednesday,

the 31st May, 1939.

Reserve Bank of New Zealand, Wellington, 15th May, 1939.

# Explanatory Note on Omission of B.-7 and B.-7a (Appropriations chargeable on Consolidated and Public Works Funds and other Accounts).

THE appropriations chargeable on the Consolidated Fund and on the Public Works Fund and other accounts have prior to the year 1939-40 been published in the Appendices under the description B.-7 and B.-7a respectively. The appropriations are compiled from the estimates of expenditure chargeable on the respective funds or accounts which have been submitted to and passed by the House. The estimates consist of the main estimates and the supplementary estimates. For reasons of economy the appropriations have not been printed separately. If it is desired to ascertain the amount appropriated for any particular item of the estimates, there must be added to the amount shown on the main estimates the amount, if any, for the same item shown on the supplementary estimates. The total amount appropriated for each vote on the estimates as opposed to the separate items of the vote (e.g., Vote "Legislative") is shown in the summary published in the supplementary estimates. For the separate items, however, both main and supplementary estimates must be consulted. The estimates for the Consolidated Fund and for the Public Works Fund are shown separately. relative order is maintained in the supplementary estimates as in the main estimates.
