1939. NEW ZEALAND.

MENTAL HOSPITALS OF THE DOMINION.

(REPORT ON) FOR 1938.

Presented to both Houses of the General Assembly pursuant to Section 78 of the Mental Defectives Act, 1911.

The DIRECTOR-GENERAL to the Hon. P. Fraser, Minister in Charge of the Department of Mental Hospitals.

Sir. — Wellington, 1st June, 1939.

I have the honour to present my annual report upon the work of the Department of Mental Hospitals for the year ended 31st December, 1938.

STATISTICAL.

There were 8,149 names of persons upon the registers at the end of the year, including 44 patients and boarders at Ashburn Hall Private Licensed Institution, and 637 patients and boarders who were absent on probation in the care of friends and relatives.

In actual residence in State hospitals on 31st December there were 7,472 persons, a decrease of 80 compared with the previous year, and of this number, 7,151 were subject to a reception order, whilst 321 were voluntary boarders.

There was a slight increase of 26 in the number admitted for the first time, the relative figures being 1,149 for this year and 1,123 for last year, and 282 former patients and boarders returned to the hospitals.

Of all classes of admissions we were able to discharge 924, or 64·50 per cent., calculated upon the admissions, but not more than 517, or 36·12 per cent., could be regarded as fully recovered.

These figures refer to all classes of admissions, including voluntary boarders, but most countries in compiling their mental hygiene statistics now differentiate between cases of acquired mental disorder and those of congenital origin, including idiots, imbeciles, and the feeble-minded.

In New Zealand, partly because it is only within recent years that we have established separate institutions for the congenitally deficient, this practice has not hitherto been followed, with the result that erroneous conclusions have tended to be drawn as to the incidence of mental disease by those unfamiliar with the system followed.

Not only does the grouping of these classes under one heading lead to fallacious comparison of our statistics with other countries, but it tends to mislead in other directions. For example, the establishment of the children's clinics at Auckland and Wellington has considerably increased the "ascertainment" of mental deficiency, and the provision of Templeton Farm Colony and Nelson Hospital as separate institutions for children has greatly increased the number of congenital cases coming under our care.

This is shown by the rise in the proportion of congenital cases in our certified institution population from 18·2 per cent. in 1927 to 26·6 per cent. in 1938.

The percentage of congenital cases admitted rose in the same period from 11·8 per cent. to 17·5 per cent., and as our "recovery rate" has been based upon the total number admitted any comparisons as to the results of treatment in the intervening years must be fallacious unless account is taken of the factors recited above.

The true position is disclosed in the subjoined tables, in which cases of acquired mental disorders are separated from cases of congenital mental deficiency.

1---H. 7.

(1) Mental Disorders.

						l	ļ			

From Table No. 1 it will be seen that of those who were admitted under a reception order as suffering from mental disorders 60-07 per cent, were discharged, and of these, 40-6 per cent, had recovered.

In the same class the ratio to population of the admissions, including Maoris, was 5-66 (males 5-03, females 6-31) per 10,000 mean population, and of first admissions 4-71 (males 4-15, females 5-25) so that 1,778 persons in the general population contributed one patient and 2,135 contributed a patient admitted for the first time.

7.11.

If we omit cases of congenital mental deficiency, who are not eligible for admission under this category, voluntary boarders now form slightly over 25 per cent. of our admissions. During 1938 there were 329 voluntary admissions, of whom 269 or 81-7 per cent. were discharged within twelve months. In the case of 26 boarders whose mental disorder became in degree sufficiently pronounced and sustained as to render it improper for them to remain on a voluntary basis, a reception order was

ALTERATIONS, ADDITIONS, AND IMPROVEMENTS.

Capital expenditure incurred upon new buildings, additions, and improvements during the year amounted to £128,816, and the following summary shows the major items making up the total:

Auckland (£907).

Water-supply has been improved for fire-fighting purposes.

The new kitchen at M. 3 Ward has been completed.

Kingseat (£71,149).

The hospital block is now complete and will be occupied at an early date.

The boiler-house and laundry machinery has been installed and is now in operation. The butchery and bakery will be in use at an early date.

Two male villas and a Nurses' Home are in course of erection.

The workshops block and garages for departmental vehicles are nearing completion.

Residences for the Medical Superintendent and Engineer have been completed.

Necessary roading, water-supply, and telephone services have been extended.

Tokanui (£6,903).

The provision of separate kitchens in wards has been of great advantage.

The water-supply to the institution has been improved.

A new villa for male patients should be ready for occupation during the coming year.

Porirua (£23,948).

The new boiler-house and workshops block will be ready for occupation at an early date.

The new bakehouse and butcher's shop is in course of erection.

A cottage has been provided for an additional Assistant Medical Officer.

The general roading has been improved during the year.

$Nelson\ and\ Ngawhatu\ (\pounds 15,458).$

The Nurses' Home is nearing completion and will be occupied at an early date.

Three new villas are in course of erection.

Hokitika (£1,140).

A commencement has been made with the crection of two additional villas.

A bicycle-shed has been erected for the use of staff.

Christchurch ($\mathfrak{L}5,974$).

Extensive alterations are being carried out in the main kitchen block.

A suitable building has been erected which will allow of an extension of occupational therapy work.

Templeton Farm Colony (£810).

The equipment for the new laundry has been installed and will be in operation at an early date.

Seacliff (£2,527).

A new sick-bay with surgery has been erected in F. 4 Ward.

At Waitati a new kitchen and bathroom have been added to F. I Ward.

PROGRAMME FOR CURRENT YEAR.

Auckland.—A new entrance porch will be constructed at No. 7 female ward, which is the admission ward, and this will greatly improve the arrangements for visitors to recently admitted patients.

The Mount Albert Borough Council's disused pumping-station is being utilized as a male occupation centre. With certain fairly inexpensive alterations, this building will be very suitable for this purpose.

It is intended to erect a hairdressing saloon.

It is intended to erect a hairdressing saloon.

Kingseat. The Nurses' Home has been commenced and should be ready for occupation by the end of the year. It is hoped to proceed with the erection of quarters for single male staff, and two new villas will be completed.

Tokanui. A very active programme of reconstruction is being carried out at Tokanui, with the view to converting the various wards and groups of wards into separate villas, each self-contained in regard to dining, cooking, &c. This programme should be completed by the end of the year.

It is hoped to erect a new bakehouse, butcher's shop, boiler-house, and laundry.

Porirua. - Plans are almost completed for the erection of several new kitchens in the main building and a remodelling of that at the lower building. This scheme includes an enlargement of the main hall which is very necessary.

The new boiler-house workshop block is practically completed, and this paves the way for radical alterations near the entrance to the building, including the provision of adequate office space and visitors' rooms. The old workshop will serve admirably as an occupation centre.

Nelson.—Three new male closed villas are in course of erection; these will house the patients presently in the main building, and their completion will enable us to proceed with the erection of villas for senile cases and administrative offices.

Hokitika.—It is hoped to erect a Nurses' Home during the year and to utilize space now occupied by staff for increase of the store.

The butcher's shop and bakery will be commenced, and also two additional villas.

Christehurch.—The workshops which were burnt down during the year are being re-erected. In the meantime the artisans are using the occupational block, which will soon become available for its proper purpose.

Seachiff.—The old boiler-house is in process of alteration to provide an occupation centre and hair-dressing saloon.

Attention will be given to modernization of the telephone and fire-alarm systems.

ABOLITION OF MAINTENANCE CHARGES.

Under section 94 of the Social Security Act, 1938, maintenance in mental hospitals is to become free of all cost to the patients and their relatives, and, consequently, the Receiver's Branch of this Department will disappear.

Prior to 1910, when the office of Receiver was established and the collection of maintenance became a function of the Head Office, this work was carried out by the Chief Clerks at the several institutions.

In his annual report for 1904 Dr. MacGregor, the Inspector-General, made the following comment:-

"On account of payment for patients, £6 2s. 3\frac{3}{4}d. was received per head. This amount speaks well for the painstaking work done by the Chief Clerks, who act as receivers. The difficulty they have in collecting the payments is incredible. The statements made by persons liable to support an insane relative under the Destitute Persons Act frequently bear the imprint of evasion."

Last year the total amount collected for maintenance was £162,135, or an average per patient of £21 0s. 8d., and I must say that our experience of the way in which relatives have met their obligations has been much happier than that described above by Dr. MacGregor.

For almost twenty-five years the office of Receiver was held by Mr. A. T. Wells, and it was almost entirely due to that officer's well-balanced judgment, sound common-sense, and sympathetic contacts with relatives that the average payments per head rose from £9 10s. 2d. in 1911 when he assumed office, to £18 6s. 2d. in 1935 when he retired, and to £21 0s. 8d. in 1938 when maintenance-collection ceased.

During the twenty-nine years in which the collection of maintenance has been a function of Head Office no less than £2,719,113 has been collected, and that with a remarkable freedom from friction or complaint. A great deal of credit in this connection is due to the Head and District Officers of the Public Trust Department, who have always been most co-operative and understanding.

During recent years payments have been made in respect of approximately 40 per cent. of the patients resident.

INCREASE IN MEDICAL STAFF.

During recent years we have had the greatest difficulty in obtaining the services of suitable medical men who desired to find a permanent career in mental hospital work. From time to time we have kept vacancies filled by recent graduates without experience or by more mature practitioners who were temporarily available, but we have felt gravely handicapped by the inability to build up an adequate trained medical staff.

I am happy to report that, following upon improvements in the salaries allotted to Medical Superintendents and Assistant Medical Officers, the position has altered, and we are better off in this respect than we have been for many years. Twelve additional medical officers joined the service at the end of the year, and there is every indication that the Department has been very fortunate in its selection. We are now fully staffed and the Medical Superintendents will be free to give their attention to certain improvements which we have had in contemplation for some time but have been unable to inaugurate.

Honour.

During the year Miss Martin, Matron at Christchurch, received the decoration of M.B.E., an award which was regarded by all the officers of the Department with great satisfaction and pleasure, in view of Miss Martin's long and faithful service to the Department.

Λ PPRECIATION.

I deeply regretted that Mr. Gavin Menzies found it necessary to relinquish the position of Receiver on account of ill health. The Department has lost a valuable officer, and the Head Office staff a much respected colleague, and we extend to Mr. Menzies our wishes for a speedy recovery.

I desire to thank Dr. John Russell, the Deputy Director-General, and all the Medical Superintendents for their loyal support at all times. I am grateful to Mr. Sinclair, Chief Clerk, and the officers at Head Office for their excellent work during the year.

1 have, &c., Theo. G. Gray.

AUCKLAND MENTAL HOSPITAL.

Dr. Buchanan reports:

I have the honour to present my annual report for the year ended 31st December, 1938.

The total number of cases under care during the year was 1.769, with a weekly average of 1,273. The admissions numbered 356—under certification 133 males, 152 females; by transfer 9 males; and as voluntary boarders, 30 males, 32 females.

During the year 144 patients and 58 voluntary boarders were discharged. Transfers to other hospitals numbered 14 (6 males and 8 females). Deaths totalled 131.

At the end of the year 196 patients were on probation, 135 on full parole, and 202 on limited parole

I append figures relative to the Psychiatric Clinic held by Drs. Hunter, Macky, and myself at the Auckland Public Hospital:

I was away on leave of absence for the greater part of the year under review. I desire to take this opportunity of expressing my gratitude to the Minister of Mental Hospitals and yourself for making this possible.

Part of my leave was spent in visiting mental hospitals and homes for congenital mental defects in England. My most intense interest was in the great strides certain hospitals have made in occupational therapy. To see this work, which in many places permeates a whole hospital, is a great experience. Later I hope to give you separately a report on what I have seen. Here, on a smaller scale, we have done occupational therapy for many years, and I have now every intention of expanding this to a scale similar to that which I have seen overseas.

The introduction of a hairdresser for the female patients has proved a most excellent innovation. She has helped many a patient to regain some personal pride, and, in consequence, a sedative effect in behaviour has resulted.

No major work has been carried out during the year, but all the same there has been consistent effort to maintain things at a good level.

Besides the usual painting programme, the other important works were the installation of machinery in the laundry and the alterations of the water service to bring our fire-fighting apparatus up to date. This latter work is not as yet fully completed.

We were unfortunate in having an outbreak of typhoid in May and June. This necessitated the procedure of blood-testing and inoculation of all patients and the members of the staff. This imposed an additional burden on our staff, already weakened in numbers. The members, however, rose well to the occasion.

In parentheses, I may state that the staff-shortage problem is almost as acute in some parts of England as it is here.

A most successful bazaar and sale of work of patients' handicrafts was held on the 2nd December, 1938. The most gratifying sum of £143 was made. This money will be devoted to the patients' recreation and providing materials for occupational work.

The Auckland Hospital Auxiliary continues to be our very good and much appreciated friend They are constant in their help in person, kind, and cash. Performances by the Waterside Workers' Band were much appreciated, as also concerts given by Miss Ward and her pupils.

Band were much appreciated, as also concerts given by Miss Ward and her pupils.

In concluding I must express my gratitude to the Medical Officers, Matron, Head Attendant, Chief Clerk, and all other members of the staff for the help and encouragement given me.

H. 7.

KINGSEAT MENTAL HOSPITAL.

Dr. Hunter reports:

I have the honour to submit my annual report for the year ending 31st December, 1938.

The total number of patients under care during the year was 596 (307 males and 289 females), with a weekly average of 577. Patients admitted for the first time numbered 2 (males), and 1 male patient was readmitted during the year. Patients admitted by transfer were 9 (7 males and 2 females). Transfers to other hospitals numbered 3, all of whom were males. There were 5 patients (4 males and 4 females) discharged, and there were 13 deaths (9 males and 4 females).

The weekly average of voluntary boarders resident during the year was 6 (3 males and 3 females). One male was discharged and committed, while there were no admissions or deaths.

The general health of the patients and staff has been excellent, on the whole, although the measles epidemic affected a large proportion of the nursing staff. I also regret to have to report the death of one of the members of our nursing staff, Nurse Mavis Evelyn Nicholson, who passed away on 20th July, 1938, following an operation. To her relatives we tender our deepest sympathy.

The building programme continues, and this year the following buildings have been completed or are in the course of construction: Medical Superintendent's house, Engineer's house, hospital and treatment centre, Villas 7 and 8 for male patients, oil-store, mortuary, workshops block. Tenders have been called for the erection of a Nurses' Home.

Renovations have been carried out to the cow-byres, and this part of the farm buildings is now in first-class order.

The installation of equipment for the laundry, engineer's block, bakehouse, and butchery has been proceeded with, and this block should be in operation early in the new year. The main thing which is causing delay is the non-arrival of the boilers, which are expected early in February, 1939.

The furnishing and equipment of the hospital and treatment centre is nearly completed, and this fine addition to the hospital, situated on a slight rise overlooking the recreation ground, has a bright and sunny outlook.

The amenities provided in this block should do much towards the successful treatment of our nervous and mentally ill.

The automatic-telephone system mentioned in last year's report has been installed, and is proving of great benefit in the administration of the hospital.

With the increasing number of patients and staff the question of suitable entertainment is becoming somewhat of a problem. The use of three rooms in a villa for the weekly dances is not satisfactory, while concerts require the transportation of seating-accommodation from villa to villa, so that a recreation hall with cinema facilities is now essential for further development of the villa system.

The staff-housing problem is acute, and will be more so when the service blocks are fully staffed. We are short of single-male-staff accommodation, and there is difficulty in securing houses in the vicinity of the hospital for married staff.

Another problem that is arising is the fact that our distance from Auckland, and the difficulty of transport has resulted in many of our staff acquiring motor-cars, and the question of staff garages has arisen. I think that this matter will be required to be dealt with in the near future.

The patients, on the whole, are happy and contented, and appreciative of the parole privileges, to which they are reacting satisfactorily. They are fully occupied in constructional work on the farm, in the grounds, gardening, laundry, and sewing-room. Their amusements have not been neglected, and they are all eligible to play in the various sports, teams, and clubs which the hospital has. Our sports clubs have had a successful and enjoyable year.

Mrs. Waugh, working under the auspices of the Auckland Hospital Auxiliary, Mental Hospitals Branch, conducts a weekly handicraft class, and this year this class has been extended to the more restless and unstable types of patients, and the results are encouraging. These patients are better behaved, and look forward eagerly to the weekly visit. I feel that this result would be enhanced if it were possible to have the handicraft class daily instead of weekly.

Mr. McFarlane, of the Public Works Department, has taken his usual active interest in the progress of the hospital, and for his many useful and practical suggestions I am very grateful.

A weekly clinic is conducted at the Auckland Public Hospital, where 89 new cases were treated, whilst there were 332 attendances. New cases were referred by Pensions Department, 65; Hospital, 5; medical practitioners, 15; voluntary, 4.

I am most grateful to those who have helped to provide entertainment and for the gifts of reading-material: to the several local branches of the Returned Soldiers' Association for their interest in ex-soldier patients; the women's division of the Farmers' Union and the Women's Institute for their interest in the activities of the hospital; the Auckland Women's Auxiliary for regular donations for the benefit of the patients: and the members of the elergy who have conducted Church services throughout the year.

Finally, I wish to thank the Chief Clerk and his staff, the Matron, Head Attendant, and all members of the staff for their very helpful and encouraging services for the benefit of the patients and in forwarding the interests of the hospital.

TOKANUI MENTAL HOSPITAL.

Dr. Tothle reports:--

I have the honour to present my annual report for the year ending 31st December, 1938.

The total number of cases under care during the year was 788, which includes 29 voluntary boarders.

Admissions numbered 108, of whom 7 were transfers from other institutions and 12 voluntary boarders.

The discharges were 50 patients under certificate, 7 voluntary boarders, and 6 transferred.

There were 48 deaths, senile decay and heart-disease being the predominant causes.

At the end of the year 674 patients, including 33 on probation and 18 voluntary boarders, remained on the register.

Reports have been made for the Justice Department on inmates at Waikeria and on children under the care of the Child Welfare Department, Hamilton. The general health of the patients has been good, though a number of cases of measles occurred among the patients and staff.

For some months we have been conducting an interesting experiment in trying to rehabilitate male schizophrenics by intensive directional treatment. In various forms this is used as a concomitant of insulin therapy, but here we have omitted the insulin. This work is still in its infancy, and though no miraculous cures can be claimed a definite improvement in conduct and personal hygiene has been noted to the extent that patients taken out of a refractory ward are now well enough to be nursed in the admission ward.

Good progress has been made in modernizing the older parts of the hospital and interior, and exterior renovation continues to be actively pursued. The detachment of Ward F. 2. is now complete, the kitchen addition is ready for use, a dining-room has been provided, and the new bath-room and improved lavatory accommodation are nearing completion. Wards F. 1 and F. 7 are in the process of being detached, and alterations will provide cooking facilities and improved bathing and lavatory arrangements. When the work has been executed Wards F. 1, F. 2, and F. 7 will be self-contained, independent units.

Part of the long corridor on the female side has already been demolished, and eventually it will be completely removed. By the separation of the wards and elimination of this corridor serious fire risk will be abolished. A veranda has been built on to F. 7 and will be particularly useful in wet weather. The double-storied veranda addition to the female admission ward is now completed, the upstairs providing extra bed accommodation and the ground floor a sun room and facilities for the treatment of recent patients who are receiving bed treatment.

The roofs of Wards F. 1 and F. 7 have been painted, and those of F. 2 and the main kitchen are to receive attention in the near future.

Stainless-steel sinks were installed in the sculleries of Wards A, C, H, and the male staff, benches renewed, and the backs tiled. Ward A has been completely repainted, and additional furniture increases its comfort. Fire-places throughout the hospital were repaired.

The male-staff quarters have been renovated, the mess-room papered, and staff sitting-room furnished. The Assistant Medical Officer's new residence is now in occupation. Various improvements and repairs were carried out on the staff houses on the hospital estate.

The pipes on the water-main from Te Λ wamutu are being replaced by spiral steel pipes, and will result in considerable economy by eliminating water leakage.

An additional Public Works store was erected, and accommodation for Public Works staff is being built. The new mortuary, in which a post-mortem table was constructed, is in use.

An all-weather road to the hospital cemetery has been made, and a small shelter for the Ministers is being provided.

Lights over the fire escapes at the Nurses' Home have been installed.

Works due to begin include the erection of a new slaughter-house, skin-room, and boiling down works, exterior painting of Ward H, Villas 4, 5, 6, and the Nurses' Home, installation of foot-baths for farm-workers in A and C Wards, and alterations to the administration block to provide quarters for five officers. It is hoped to build an ample storage shed and a glass-house in the near future.

The vegetable garden has been extended, lawns laid down round the male villas, and flowering shrubs planted.

I shall be glad to see work commenced on the new laundry, engine-room, butcher's shop, and bakery as soon as possible. The laundry has been outgrown, and the butchery and bakery are out of date.

A large number of patients are continuously employed on the farm, and further swamp land has been drained. We joined the herd-testing association, and our cows are now regularly tested. During the year some of our stock were affected with facial eczema, but, fortunately, not to any serious extent. It has been suggested that the cow-byres be moved to the centre of the farm. This would be an advantage to both farm and hospital, as the cows will have a shorter distance to travel and valuable building-sites for new male villas be placed at our disposal.

Visits were made by the Hon. P. Fraser, Minister in Charge of Mental Hospitals, and Mr. Shapson, Public Service Commissioner for Western Australia.

Mr. S. A. Empson, who for many years has been associated with this hospital as Coroner, retired, Mr. W. Jeffery being appointed as his successor.

The usual entertainments and games were provided throughout the year. Mr. Dunlop, Superintendent of Waikeria, arranged for performances by the Waikeria Concert Party, and the excellent programmes were greatly appreciated by all.

I am deeply indebted to the members of the clergy who have conducted the devotional services, the Te Awamutu Library Committee for donation of books, various returned soldiers' associations for gifts of money and extra comforts, branches of women's institutes, and all those openhearted individuals who by their generosity and interest in the hospital have materially contributed to the happiness of our patients. Mr. Findlay, our Official Visitor, has again given every assistance in promoting the welfare of the hospital.

In conclusion, I desire to thank all members of the staff who by their efforts and co-operation have helped me in the care of the patients and administration.

PORIRUA MENTAL HOSPITAL.

Dr. Hart reports:

I have the honour to submit my report for the year ending 31st December, 1938.

The total number of cases under care during the year was 2,011, of whom 1,774 were committed patients, 228 voluntary boarders, and the remainder of cases were remanded for observation.

Admissions numbered 429—under certification, 307; as voluntary boarders, 113; and on remand, 9.

During the year 301 persons (196 committed patients and 105 voluntary boarders) were discharged, whilst a further number were sufficiently recovered mentally to leave the hospital on probation to the care of relatives or friends.

Deaths numbered 118, and 30 patients were transferred to other mental hospitals.

These figures in comparison with those of the previous year show a deduction in the number of deaths, a slight reduction in total number of cases under care and number of admissions, whilst the number of discharges and the percentage of voluntary boarders on total admissions have both increased. Over 26 per cent. of all admissions for the year entered hospital voluntarily.

During the year psychiatric work has been carried out as formerly in the psychiatric wards in the Wellington Public Hospital and at the out-patients' clinic at Wellington and Palmerston North. In the latter portion of the year, owing to medical staffing difficulties, the clinic at Palmerston North was temporarily discontinued.

The number of individual cases dealt with in this extra-mural work was as follows: (1) Cases in psychiatric wards, Wellington Public Hospital, 232: (2) out-patients' clinic, Wellington, 189: (3) out-patients' clinic, Palmerston North, 64.

The major structural work completed during the year was the boiler-house block containing, as it does, engineers', carpenters', painters', and upholsterers' shops. Unfortunately, the non-arrival of the boilers and certain other machinery has prevented the erected building from being brought into full use. This delay has also prevented the reconstruction of the old boiler-house block as an occupational therapy centre. A shearing-shed, with equipment, yards, dip, &c., was erected on the farm. The bakers', butchers' shop, and cool-storage block is nearing completion, whilst an additional residence for an Assistant Medical Officer will be ready for occupation at an early date. An additional washing-machine, a blanket-washer, and three modern electrically driven hydro extractors were added to the laundry equipment. Remodelling of the driers, which is at present in hand, plus an additional vac ironer, should raise the laundry efficiency to the desired standard. It is hoped that the already planned decentralization kitchen scheme for the main building will be commenced at an early date. The completion of this scheme along with certain additional equipment for existing kitchens in other units is complementary to the proposed improved variety in patients' dietary. I also hope that financial provision will be made during the year to arrange for the necessary increase in medical and clerical office accommodation and visiting-rooms in the present administration block.

Comprehensive improvements and overhaul of the hospital sewage scheme have been under review for some considerable time, but, apart from the relaying of a portion of the sewage channels about a year ago, very little progress has been made towards completing this urgent and necessary work. Throughout the year the artisan staff have been fully occupied in renovating, repairing, and making minor alterations to existing buildings. Certain other repairs and renovations, such as painting, have been completed by outside contract. Some 71 chains of hospital roads and 21 chains of paths were bitumen-sealed during the year.

Apart from occupational work for patients in the artisans' shops, sewing-rooms, gardens, farm, &c., there has been during the year a definite expansion in the more specialized occupational work such as spinning, weaving, cane-work, and simple handicrafts. Λ female and male instructor give tuition in these subjects, and it is hoped in the coming year to increase the types of specialized work undertaken.

Activities on the farm, orchard, flower and vegetable gardens have continued much as formerly. Additional acreage has been taken for the growing of vegetables. Apart from minor fluctuations due to variation in seasons, the returns from the vegetable gardens have during the last three or four years shown a steady increase.

9 II. 7.

The usual recreations for patients and staff have been provided for during the year. Patients' sports meetings, bowls, tennis, golf, concerts, fortnightly dances, weekly cinema, and picnics to the beach have been organized and enjoyed by various patient groups. I am grateful to Mr. Hooker for continued effort in arranging for the supply of certain magazines and weeklies for the library and reading-room. I have to thank numerous societies and charitable organizations and individuals too numerous to mention who have throughout the year provided various comforts, reading-matter, and donated money towards the patients' recreation. We are also grateful to various people who have given concerts at the hospital from time to time during the year.

I regret to have to record the death of the Rev. Mr. Harding, which occurred during the year. Mr. Harding for many years associated himself with the work of the hospital, and was indefatigable in assisting in the arranging of concerts and entertainments for patients. He will be greatly missed

by patients and staff.

The shortage of medical staff existing in 1937 became more acute last year, and more especially during the latter few months of the year. In this respect I particularly wish to thank my deputy, Dr. R. G. T. Lewis, on whose shoulders fell the greater part of the burden occasioned by the absence of Assistant Medical Officers.

As with other mental hospitals, we experienced during the year a difficulty in getting probationer nurses, and this shortage was in part overcome by the female nursing staff working overtime. I should like to express my appreciation to the female nursing staff, who maintained hospital efficiency under these somewhat trying conditions.

In conclusion, I wish to thank the staff as a whole for their loyal co-operation in the work of the year.

NELSON MENTAL HOSPITAL.

Dr. Williams reports:

I have the honour to present my annual report for the year ending 31st December, 1938.

The total number of cases under care during this period was 923, of whom 896 were held under a reception order, 25 were voluntary boarders, and 2 were sent to us on remand for observation.

The admissions totalled 74, of whom 12 were voluntary boarders and 62 were certified. Of the latter, 18 were admitted under the provisions of section 8 of the 1928 Amendment to the Act.

The discharges, 38 in number, included 11 voluntary boarders.

There were 56 deaths during the year, amongst whom were several feeble children, whose poor resistive power could not withstand the whooping-cough, which occurred as an epidemic. As is frequent when whooping-cough is prevalent, there were other epidemics, of minor disorders chiefly. Most notable was measles, and more than 300 of our patients were affected, some having as many as three attacks. A large proportion of the staff was affected also.

The principal item in the building programme has been the creeting of a Nurses' Home at

Ngawhatu. This should be completed and ready for occupation about the middle of 1939.

The road up Yorks Valley was tar-sealed as far as Villa 3. New piggeries were built at Ngawhatu, but await some additions before they will be ready for occupation. Staff cottages were renovated; extensions were made to water-supply; painting of and repairs to butcher's shop were done; and the developmental work in Yorks Valley continued, though, as noted previously, paucity of good labour has resulted in this progressing rather slowly.

At Nelson fire-breaks were put through the pine plantation; the adjoining hill was cleared, and some thousands of trees planted there. Additions were made to the sewage systems, and the farm buildings, stores block, and artisans' workshop were renovated where required and are being repainted. A good deal of inside painting has been done by the working-party also.

Authority has been received for the repainting of Villa No. I, but scarcity of suitable labour has made it not possible to do this work yet. Similarly, we have been unable to obtain adequate workmen for the fencing of Stoke Farm above Poorman's Valley, although we have the materials on hand.

Tenders have been called for the erection of three new male villas. These will be most welcome, and will result in better classification and treatment of patients.

A modern admission block with sick-bay and theatre facilities and independently situated is really very desirable and necessary.

Miss Soutter. Kitchen Supervisor, has been here for some little time and has offered useful suggestions. She is much in favour of the system in vogue of cooking in the individual villa.

Fire drill has been carried out regularly, and appliances inspected by the Public Works Department, and their recommendations adopted. The local fire brigade has visited in order to gain familiarity with the lay-out.

The patients have been well catered for in the matter of annusements and recreation, and in this respect my thanks are due to many individuals, business firms, and societies in Nelson for their continued support and for donations of moneys and goods.

Miss Cooksey and party have been particularly good in providing outings for the children; the Sunshine Fund organized by Mrs. Scantlebury for provision also of picnics for the children has been very successful, and the results were much appreciated.

To the Official Visitor, to the visiting Ministers of religion, to my colleague Dr. Crawshaw, and

to the staff generally, for assistance and co-operation I wish also to express my thanks.

HOKITIKA MENTAL HOSPITAL.

Dr. Childs reports:-

I have the honour to submit my report for the year ending 1938.

At the commencement of the year the patients on the register numbered 462. The admissions proper were 20, while 5 males and 6 females were received on transfer.

The discharges numbered 13, transfers to other institutions 4, and deaths 24.

The total number under treatment was 493, and the number remaining on the register at the end of the year 452.

There were 3 voluntary boarders on the register at the beginning of the year; 9 were admitted

and 4 discharged.

The general health of the patients has been satisfactory.

A new model piggery and a cycle-shed have been erected during the course of the year. Arrangements are almost completed for the building of a new Nurses' Home and for the erection of two closed villas, one on the male and one on the female side.

With the Nurses' Home completed it will then be possible to enlarge the existing store accommodation, which, owing to the continued growth of the institution, has become inadequate, while the additional two closed villas will allow of a better classification of the patients than is possible at present.

The usual routine of farming and gardening operations have been carried out during the year, 8 acres of swamp land have been cleared, drained, and left fallow, and 5 acres of fallow land sown

down in grass.

The painting gang has been active during the year, and the usual maintenance-work carried out.

The Hokitika Band has, as usual, visited the hospital frequently and supplied most of the music for the patients' dances.

A monthly clinic has been held at Greymouth Hospital, and the Westland Hospital visited when

required.

The playing-field has been enlarged and improved, and games and recreation are playing an important part in the life of the institution, but the want of a recreation hall is becoming increasingly urgent. Picnic, swimming, theatre, and shopping parties are arranged when possible, and suitable patients are given the opportunity of attending outside entertainments, such as the local race meetings, sports gatherings, &c.

Thanks are due to those who have provided entertainment during the year and to those who

have been responsible for Christmas gifts and cheer.

The clergy have made frequent visits, and regular services have been held.

Mrs. Fane, who has a considerable knowledge of social work, has been appointed Official Visitor on the female side, and the Official Visitor for the male side has shown his usual interest in the welfare of the patients.

I wish to thank the staff for the generous support they have given me during the year.

CHRISTCHURCH MENTAL HOSPITAL.

Dr. McKillop reports: --

I have the honour to forward my report for the year ending 31st December, 1938.

On 1st January, 1938, there were 1,394 patients (773 males, 621 females) on the register. During the year 227 persons (107 males, 120 females) were admitted and 20 patients were transferred from other institutions. Discharges totalled 141 (61 males, 80 females), and there were 1,641 persons under care during the year.

Out of 11 cases sent for observation, 6 were committed and 5 were discharged.

Voluntary boarders numbered 66 (males 34, females 32), and of this number, 22 males and 17 females improved sufficiently to return to their former duties.

There were 95 deaths during the year, the cause in most cases being senile decay.

Much has been done during the past few years to make the conditions of the patients more comfortable, and overcrowding is not now in evidence. Personally, I should like to see separate institutions for the senile cases. At the present time many aged persons are sent to a mental hospital on the appearance of slight aberration; such cases seldom give us any trouble. The provision of two new villas, one for female patients and one for males to accommodate senile patients, and of a hospital block would make this mental hospital quite up to date.

The pumping machinery has been installed, and the water-supply is now of excellent quality

and quite adequate. The old system has been retained and connected up for fire purposes.

The laundry at Templeton, although completed at the time of my last report, is not yet functioning, and the delay is causing very great inconvenience. Present indications are that it is unlikely to be in use for some months, though I understand tenders have been called for the erection of the machinery.

The new bakehouse at Sunnyside is in use, and extensive alterations are now being carried out in the kitchen.

The occupational therapy building has been completed and will be occupied very soon; the extension of this class of treatment is likely to prove of great value. The results have been very gratifying.

11

The new poultry-houses are now in use. The latest form of equipment has been installed, and the prospects of making this branch of farm-work a success are very good. Several experienced poultrymen have inspected the plant and have unanimously considered the layout an excellent one

The farm generally has had a good year.

Patients' recreation has been carried out on the usual lines. I have to thank the concert parties who have come to Sunnyside and to Templeton. The concerts and picture programmes have proved of great enjoyment to the patients. Miss Jackson and the staff of the winter gardens provided the Christmas tree and a party for the children, and I have to thank them for their efforts.

The numbers attending the clinic at the Christchurch Hospital have increased considerably, and many new cases have come of their own accord apart from the cases sent by general practitioners. I have visited Timaru Hospital monthly; there the clinic is also functioning well.

Mr. H. D. Acland, K.C., and the Official Visitors (Mrs. Williams, Mr. Hanna, and the Rev. Mr. R. Martin) have paid regular visits to the hospital. They are keenly interested in the patients and the work of the institution. We were fortunate to get the services of Dr. Cameron during the latter part of the year, and it is very pleasing to know that Drs. Heath and O'Reilly have been appointed to the Sunnyside staff. I have to record my thanks to Dr. Bellringer for his valued assistance during a most trying year.

I regret exceedingly that the services of Mr. Thomas have been lost to the Department. This most efficient Chief Clerk has retired after almost forty years of service. I have to thank him and his office staff, the Matrons, Head Attendants, and the staff as a whole for their assistance.

SEACLIFF MENTAL HOSPITAL.

Dr. Brown reports:-

I have the honour to present my report for the year ending 31st December, 1938.

On the 1st January, 1938, there were 1,133 patients on the register. During the year 142 patients were admitted, 75 were discharged, and 10 were transferred to other institutions. The total number of patients under care during the year was 1,275.

During the year 80 voluntary boarders were under care, and 40 still remain.

There were 74 deaths, the chief causes being senile decay and cardio-vascular disease.

At the end of the year there were 1,071 patients and 37 boarders resident. There has been a decrease in the total population, but the overcrowding has only been relieved to that extent so that the male side is overcrowded to the extent of 82 and the female side to 67.—I would again emphasize the need for new admission units.

The general maintenance of the hospital has involved much work. Various bathrooms and lavatories have been repaired and remodelled, and much painting, both external and internal, has been done. A new bathroom has been built in F. 1 Ward at Waitati, and a kitchen for that ward will soon be completed. A sick bay with a surgery is almost finished in F. 4 Ward at Seacliff. The conversion of the old boiler-house into a unit for occupational therapy is well in hand. The water mains from Double Hill continue to give trouble from time to time due to the slipping ground, and many repairs have been effected on them.

The gardens and the grounds have been well looked after, and the farm has had a satisfactory year.

Miss Miller, of the Red Cross Society, has continued her teaching of handicrafts to the patients with satisfactory results. The building which is being converted to an occupational centre will be ready for use shortly, and it will allow this form of treatment to be extended to patients who cannot receive it under existing conditions. The members of the Dunedin Branch of the Womens' National Council continued to visit and to teach sewing and fancy work to the female patients. My thanks are due to these ladies for their kindly interest.

Included in the occupational block will be a fully-equipped hairdressing-room, and this, with the appointment of a full-time hairdresser, will provide a service which should be greatly appreciated, especially by the female patients.

Further alterations to the main kitchen, including a hot-plate, have helped to improve the service of meals to the wards.

In the early hours of the morning of 20th July the wooden dining-room of F. 1 Ward was destroyed by fire. When the outbreak was discovered the wooden building was beyond saving, and the attendants and artisans did excellent work in controlling the blaze and preventing its spread to the adjacent buildings. The nurses evacuated the patients from F. 1 Ward with a total absence of fuss or panic, and the conduct of the whole staff was most praiseworthy.

in December, during heavy rains, a creek overflowed its banks and did extensive damage to the kitchen garden, as well as flooding the kitchen, store, and workshops. Despite the loss of a portion of our main crop of vegetables, the gardener has contrived to keep the kitchen well supplied with fresh vegetables.

The treatment of cases of schizophrenia with insulin was commenced in June. One series of cases has completed the treatment, and a second series is at present undergoing and will shortly complete it. The technique of this work is intricate and exacting, and unremitting medical and nursing attention is necessary for its success. At this stage figures relating to our results would be fallacious, but the results have been most encouraging, in some cases quite startling. The treatment has its undoubted dangers, but, despite them, it is a marked advance in the treatment of these unfortunate people, and my opinion is that it is well worth pursuing. I am much indebted to the Otago Medical School and to Professor D'Ath in particular for a great deal of help in the investigation of these cases.

For the entertainment of the patients I am indebted to various organizations. Concerts have been provided by the Dunedin Male Voice Choir, the Justices of the Peace Association, the Orphans Club, the Dunedin Choral Society, and the United Congregational Choir. The Salvation Army, the West Harbour Band, and the St. Kilda Band have provided enjoyable band entertainments. The staff Sports Club has entertained the patients at various times. Many of these concerts have been given through the agency of Mr. Stevens, of the Patients' and Prisoners' Aid Society, and I am grateful to him and his society which has provided the transport for these concert parties. The Otago Agricultural and Pastoral Association and the Waikouaiti Racing Club granted free admission to the show and race meeting. To them and to the companies who provide the weekly picture programmes I wish to express my thanks. The Returned Soldiers' Association have provided tobacco and other comforts for the soldier patients, and I am in their debt also.

I have to acknowledge the gift of more wireless sets from the Patients' and Prisoners' Aid Society. Every ward in the hospital is now equipped with a set, and the entertainment so provided is greatly enjoyed by the patients.

I am on the honorary staff of the Dunedin Public Hospital and visit there twice a week. During the year 189 new cases were seen either in the wards or in the outpatients' clinic. I saw 27 cases on my monthly visits to the Oamaru Public Hospital. Dr. Hay has conducted a monthly clinic in the Invercargill Public Hospital, and 34 new cases were seen by him.

The Hon. P. Fraser, Minister in Charge of Mental Hospitals, visited the hospital on the 28th October. He spent the whole day with us and saw round the greater part of the institution. His knowledgeable interest in our work was greatly appreciated.

Mr. C. B. Barrowclough, the District Inspector, and Mr. A. Stevens, the Official Visitor, paid us many visits and showed a kindly interest in the well-being of the patients.

To Mrs. McLaren, the Matron, and to Mr. Beasley, the Head Attendant, I would tender my thanks for their loyal co-operation. They and their staffs worked most efficiently, and the way in which the nursing staff, both male and female, worked to make the insulin treatment a success is worthy of the highest commendation. I have also to thank Mr. Thomas, the Chief Clerk, and the various other heads of departments and their staffs.

The shortage of medical staff placed much extra work on Dr. Hay and Dr. McLachlan, and the insulin treatment added to their already onerous duties. I wish to place on record my appreciation of their ungrudging work and helpful co-operation.

MENTAL NURSES.

In December the usual examination was held for the registration of mental nurses, when the following passed:—

Passed top for Dominion: Miss M. T. Miller (Porirua).

Auckland: Nurses-J. R. Carnie*, E. J. Christie, I. E. H. Porter, E. J. Wendelborn.

Papakura: Attendant-D. R. Curin. Nurses-N. L. Jackson, A. M. Jones, E. L. Quinn.

Tokanui: Attendants—L. H. Allen, C. A. McDonald, W. J. Pittams*, R. J. Wilkinson. Nurses—H. O. Harris, P. Jacobs, M. D. Moyes, M. Puch.

Porirua: Attendants—II. A. Beasley, B. C. Ewing, H. M. Stitt, C. Todd. Nurses.—E. Burton,
M. B. Cartwright, O. Davies, E. Ford*, N. D. Hebbend, S. E. Hickman, K. V. Kane*,
T. M. McConachy, M. T. Miller*, M. A. Poole, E. M. Shelton*.

Nelson: Attendant---L. J. McMurray, Nurses---C. I. H. J. Higgs*, J. F. Knight, M. M. Pascoe, M. Rees.

Hokitika: Attendants-J. S. G. Diedrichs, A. F. J. Dowling.

Christchurch: Attendants—R. G. S. Burke*, D. E. A. Cocks, R. A. D. Fulton*, W. K. Greer, H. J. McLeod, C. P. Pablecheque. Nurses—M. N. Ashby, J. Cundell, E. M. Davidson, L. E. Hickman*, N. E. Johnson*, R. E. Torrie, R. M. White. Templeton Farm: Male Institution Officer—W. J. T. Maunder. Female Institution Officer—T. E. M. McAra.

Seacliff: Attendants—H. D. Bell, B. Jaquiery, G. M. Proudfoot, A. Rankine, T. S. Ruddiman, L. Stewart. Nurses—J. M. B. Burns, P. M. Kofoed, M. A. Maker, J. J. Rankine, F. M. Valentine, E. V. M. Wilson.

APPENDIX.
